Research Teams and Partnerships National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Chemical Sciences Roundtable, 2000-02-03 The third workshop of the Chemical Sciences Roundtable Research Teams and Partnerships was held in Irvine California on May 2 3 1999 The presentations and discussions at the workshop considered the current status of research partnerships in the chemical sciences and methods to improve the ability to form and maximize such collaborations This volume presents the results of that workshop

**Research Collaboration and Team Science** Barry Bozeman, Craig Boardman, 2014-05-16 Today in most scientific and technical fields more than 90% of research studies and publications are collaborative often resulting in high impact research and development of commercial applications as reflected in patents Nowadays in many areas of science collaboration is not a preference but literally a work prerequisite The purpose of this book is to review and critique the burgeoning scholarship on research collaboration The authors seek to identify gaps in theory and research and identify the ways in which existing research can be used to improve public policy for collaboration and to improve project level management of collaborations using Scientific and Technical Human Capital STHC theory as a framework Broadly speaking STHC is the sum of scientific and technical and social knowledge skills and resources embodied in a particular individual It is both human capital endowments such as formal education and training and social relations and network ties that bind scientists and the users of science together STHC includes the human capital which is the unique set of resources the individual brings to his or her own work and to collaborative efforts Generally human capital models have developed separately from social capital models but in the practice of science and the career growth of scientists the two are not easily disentangled Using a multi factor model the book explores various factors affecting collaboration outcomes with particular attention on institutional factors such as industry university relations and the rise of large scale university research centers

**Research Collaboration between Europe and Latin America** Rigas Arvanitis, Jacques Gaillard, 2014-02-19

International collaboration has become increasingly important in carrying out research activities This book written by a large group of scholars from Europe and Latin America maps analyses and discusses research collaboration between the two continents during the last twenty years The empirical material underlines the richness and the variety of the links that bind the two continents well beyond the simplified views of science either as the brainchild of global networking or as a result of dependence The book also develops an innovative methodological approach combining bibliometric analysis social surveying in depth interviews and a careful analysis of research programmes and policies While arguing that the asymmetry of relations that once existed in cooperation has turned into a more equal partnership between the two continents it deciphers some of the reasons behind this more balanced cooperation It also challenges the view of science as a global self organising system through collective action at the level of researchers themselves On the contrary the importance of policy institutions

and previously developed research is highlighted and recognised ICT Influences on Human Development, Interaction, and Collaboration Chhabra, Susheel, 2012-08-31 This book creates awareness on how ICTs contribute to human development in multiple areas including the link between ICTs and economic social and political aspects of human development Provided by publisher *UNESCO Science Report* UNESCO, 2021-06-18 *Comparative Approach to Drivers, Trends, and Challenges in Online Higher Education: Pre- and Post-COVID-19* Amemado, Dodzi Jean-Antoine, 2025-04-11 Online higher education has seen significant transformations in recent years particularly in the wake of the COVID 19 pandemic A comparative approach to understanding the drivers trends and challenges in online learning reveals a shift from pre pandemic to post pandemic periods Before COVID 19 online education was seen as a supplementary option for non traditional students driven by technological advancements and demands for flexibility However the pandemic created a fast adoption of online platforms making digital learning a central feature of higher education This shift has shown greater academic accessibility and global reach but reveals pressing challenges related to digital equity quality of education and student engagement Examining these issues may highlight the evolving nature of online higher education and provides a framework for understanding its future trajectory *Comparative Approach to Drivers Trends and Challenges in Online Higher Education Pre and Post COVID 19* explores new strategies and challenges in global online higher education It offers insights into the motivations behind technological adoption in universities the obstacles faced and emerging trends across various regions This book covers topics such as data science digital technology and blended learning and is a useful resource for educators computer engineers academicians researchers and scientists *Beyond the Molecular Frontier* National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Committee on Challenges for the Chemical Sciences in the 21st Century, 2003-03-19 Chemistry and chemical engineering have changed significantly in the last decade They have broadened their scope into biology nanotechnology materials science computation and advanced methods of process systems engineering and control so much that the programs in most chemistry and chemical engineering departments now barely resemble the classical notion of chemistry *Beyond the Molecular Frontier* brings together research discovery and invention across the entire spectrum of the chemical sciences from fundamental molecular level chemistry to large scale chemical processing technology This reflects the way the field has evolved the synergy at universities between research and education in chemistry and chemical engineering and the way chemists and chemical engineers work together in industry The astonishing developments in science and engineering during the 20th century have made it possible to dream of new goals that might previously have been considered unthinkable This book identifies the key opportunities and challenges for the chemical sciences from basic research to societal needs and from terrorism defense to environmental protection and it looks at the ways in which chemists and chemical engineers can work together to contribute to an improved future *Measuring the Economic Value of Research* Kaye Husbands Fealing, Julia I. Lane, John L. King, Stanley R.

Johnson,2017-12-28 The scientific advances that underpin economic growth and human health would not be possible without research investments Yet demonstrating the impact of research programs is a challenge especially in areas that span disciplines industrial sectors and encompass both public and private sector activity All areas of research are under pressure to demonstrate benefits from federal funding of research This exciting and innovative study demonstrates new methods and tools to trace the impact of federal research funding on the structure of research and the subsequent economic activities of funded researchers The case study is food safety research which is critical to avoiding outbreaks of disease The authors make use of an extraordinary new data infrastructure and apply new techniques in text analysis Focusing on the impact of US federal food safety research this book develops vital data intensive methodologies that have a real world application to many other scientific fields Ivory Tower and Industrial Innovation David C. Mowery,Richard R. Nelson,Bhaven N.

Sampat,Arvids A. Ziedonis,2015-02-01 Since the early 1980s universities in the United States have greatly expanded their patenting and licensing activities The Congressional Joint Economic Committee among other authorities have argued that this surge contributed to the economic boom of the 1990s And many observers have attributed this trend to the Bayh Dole Act of 1980 Using quantitative analysis and detailed case studies this book tests that conventional wisdom and assesses the effects of the Act examining the diverse channels through which commercialization has occurred over the 20th century and since the passage of the Act **Encyclopedia of E-Collaboration** Kock, Ned,2007-12-31 This encyclopedia provides the
