Fracture mechanics of concrete: Material characterization and testing Alberto Carpinteri, Anthony R. Ingraffea, 2012-12-06 In this volume on the mechanics of fracture of Portland cement concrete the general theme is the connection between microstructural phenomena and macroscopic models The issues addressed include techniques for observation over a wide range of scales the influence of microcracking on common measures of strength and deformability and ultimately the relationship between microstructural changes in concrete under load and its resistance to cracking It is now commonly accepted that in past attempts to force fit the behavior of concrete into the rules of linear elastic fracture mechanics proper attention has not been paid to scale effects Clearly the relationships among specimen size crack length and opening and characteristic material fabric dimensions have been in comparison to their counterparts in metals ceramics and rocks abused in concrete Without a fundamental understanding of these relationships additional testing in

search of the elusive single measure of fracture toughness has spawned additional confusion and frustration No one is in a better position to document this observation than Professor Mindess

Review of Progress in Quantitative Nondestructive Evaluation Donald O. Thompson,Dale E. Chimenti,2012-12-06 In this volume parts 1 and 2 are contained the edited papers presented at the annual Review of Progress in Quantitative NDE held at the University of California San Diego August 1 6 1982 This Review possibly the most comprehensive annual symposium emphasizing both ongoing research and applications in quantitative NDE was sponsored by the Center for Advanced NDE at the Ames Laboratory of the U S Department of Energy in cooperation with the Materials Laboratory of the Air Force Wright Aeronautical Laboratories and the Defense Advanced Research Projects Agency Over 300 attendees representing various government agencies and the industrial and university communities participated in the technical presentations poster sessions and discussions The symposium benefited from the insight of two keynote speakers Dr Harris Burte of the Materials Laboratory AFWAL and Mr Ward Rummel of the Martin Marietta Corporation who presented complementary messages Dr Burte pointed out the need to identify windows to serve as guides for focusing NDE research The window concept may be thought of as an opportunity for the application of NDE technology to an important

problem and through this application to identify knowledge gaps which must be filled by generic research This concept simultaneously provides a mechanism for the solution of a direct application problem and a set of strong guidelines for generic research directions Mr Rummel called attention to the value of lessons learned from var Concise Encyclopedia of Composite Materials Anthony Kelly,1989 The Concise Encyclopedia of Composite Materials provides a full and up to date account of composite materials particularly fiber composites **Handbook of Measurement in Science and Engineering, Volume 2** Myer Kutz,2015-12-03 A multidisciplinary reference of engineering measurement tools techniques and applications Volume 2 When you can measure what you are speaking about and express it in numbers you know something about it but when you cannot measure it when you cannot express it in numbers your knowledge is of a meager and unsatisfactory kind it may be the beginning of knowledge but you have scarcely in your thoughts advanced to the stage of science Lord Kelvin Measurement falls at the heart of any engineering discipline and job function Whether engineers are attempting to state requirements quantitatively and demonstrate compliance to track progress and predict results or to analyze costs and benefits they must use the right tools and techniques to produce meaningful useful data The Handbook of Measurement in Science and Engineering is the most comprehensive up to date reference set on engineering measurements beyond anything on the market today Encyclopedic in scope Volume 2 spans several disciplines Materials Properties and Testing Instrumentation and Measurement Standards and covers Viscosity Measurement Corrosion Monitoring Thermal Conductivity of Engineering Materials Optical Methods for the Measurement of Thermal Conductivity Properties of Metals and Alloys Electrical Properties of Polymers Testing of Metallic Materials Testing and Instrumental Analysis for Plastics Processing Analytical Tools for Estimation of Particulate Composite Material Properties Input and Output Characteristics Measurement Standards and Accuracy Tribology Measurements Surface Properties Measurement Plastics Testing Mechanical Properties of Polymers Nondestructive Inspection Ceramics Testing Instrument Statics Signal Processing Bridge Transducers Units and Standards Measurement Uncertainty Data Acquisition and Display Systems Vital for engineers scientists and technical managers in industry and government Handbook of Measurement in Science and Engineering will also prove ideal for members of major engineering associations and academics and researchers at universities and laboratories
