

The Various Appearances of Sexism:

- Sexism within the STEM fields manifests itself in many different ways. This particular gender bias can be anything related to the professional woman from her age to her appearance. Three examples of the most common sexism in science are included in these different studies:
 - *"The Underestimation of Female Students by their Male Peers in Undergraduate Classrooms"* conducted by Grunspan
 - *"Mother Penalty, Daddy Bonus"* study by Correll, Benard & Paik
 - *"General stereotypes About Gender and Science: Women ≠ Scientists"* study conducted by Linda Carli

Sexism And Science

Evelyn Reed

Sexism And Science:

A Lab of One's Own Rita Colwell, Sharon Bertsch McGrayne, 2021-08-17 Colwell the first female director of the National Science Foundation discusses the entrenched sexism in science the elaborate detours women have taken to bypass the problem and how to fix the system When she first applied for a graduate fellowship in bacteriology she was told We don't waste fellowships on women Over her six decades in science as she encounters other women pushing back against the status quo Colwell also witnessed the advances that could be made when men and women worked together Here she offers an astute diagnosis of how to fix the problem of sexism in science and a celebration of the women pushing back **Sexism and Science** Evelyn Reed, 1989 **Sexism & Science** Evelyn Reed, 1978 The Science Question in Feminism Sandra G. Harding, 1986 Can science steeped in Western masculine bourgeois endeavors nevertheless be used for emancipatory ends In this major contribution to the debate over the role gender plays in the scientific enterprise Sandra Harding pursues that question challenging the intellectual and social foundations of scientific thought Harding provides the first comprehensive and critical survey of the feminist science critiques and examines inquiries into the androcentricism that has endured since the birth of modern science Harding critiques three epistemological approaches feminist empiricism which identifies only bad science as the problem the feminist standpoint which holds that women's social experience provides a unique starting point for discovering masculine bias in science and feminist postmodernism which disputes the most basic scientific assumptions She points out the tensions among these stances and the inadequate concepts that inform their analyses yet maintains that the critical discourse they foster is vital to the quest for a science informed by emancipatory morals and politics Philosophy of Science after Feminism Janet A. Kourany, 2010-09-09 In this monograph Janet A Kourany argues for a philosophy of science more socially engaged and socially responsible than the philosophy of science we have now The central questions feminist scientists philosophers and historians have been raising about science during the last three decades form Kourany's point of departure and her response to these questions builds on their insights This way of approaching science differs from mainstream philosophy of science in two crucial respects it locates science within its wider societal context rather than treating science as if it existed in a social political and economic vacuum and it points the way to a more comprehensive understanding of scientific rationality one that integrates the ethical with the epistemic Kourany develops her particular response dubbed by her the ideal of socially responsible science beyond the gender related questions and contexts that form its origins and she defends it against a variety of challenges epistemological historical sociological economic and political She ends by displaying the important new directions philosophy of science can take and the impressive new roles philosophers of science can fill with the approach to science she offers Feminism and Science Nancy Tuana, 1989-11-22 thoughtful critiques of the myriad issues between women and science Belles Lettres Outstanding collection of essays that raise the fundamental questions of gender in what we have been taught are objective sciences

WATERwheel all of the articles are well written informative and convincing Admirable editorial work makes this anthology unusually helpful for scholars and students Highly recommended Choice Questioning the objectivity of scientific inquiry this volume addresses the scope of gender bias in science The contributors examine the ways in which science is affected by and reinforces sexist biases The essays reveal science to be a cultural institution structured by the political social and economic values of the culture within which it is practiced

Has Feminism Changed Science? Londa Schiebinger, 2001-04-02 Do women do science differently And how about feminists male or female The answer to this fraught question carefully set out in this provocative book will startle and enlighten every faction in the science wars Has Feminism Changed Science is at once a history of women in science and a frank assessment of the role of gender in shaping scientific knowledge Science is both a profession and a body of knowledge and Londa Schiebinger looks at how women have fared and performed in both instances She first considers the lives of women scientists past and present How many are there What sciences do they choose or have chosen for them Is the professional culture of science gendered And is there something uniquely feminine about the science women do Schiebinger debunks the myth that women scientists because they are women are somehow more holistic and integrative and create more cooperative scientific communities At the same time she details the considerable practical difficulties that beset women in science where domestic partnerships children and other demanding concerns can put women's and increasingly men's careers at risk But what about the content of science the heart of Schiebinger's subject Have feminist perspectives brought any positive changes to scientific knowledge Schiebinger provides a subtle and nuanced gender analysis of the physical sciences medicine archaeology evolutionary biology primatology and developmental biology She also shows that feminist scientists have developed new theories asked new questions and opened new fields in many of these areas

Women Changing Science Mary Morse, 2001-10-19 Women Changing Science Voices from a Field in Transition explores the experiences of today's women in the natural and physical sciences In interviews with women at all stages of their scientific careers Ms Mary Morse a frequent contributor to Utne Reader magazine and a community activist unearths a picture of science that rarely sees print a field in upheaval with female and male scientists doing their best to survive in rapidly shifting social and professional climates Read the honest appraisals of the extraordinary women who are determined to define a new scientific culture Step into a woman owned engineering firm where employees are encouraged to bring their infants to work Hear why a young female physician would jettison the entire residency process to foster safer saner and more effective medical training Learn how a group of established women scientists and science policy makers succeeded and about their predictions for women's impact on the field The author and her subjects present meaningful solutions to the current dilemmas faced by scientists including ways to redesign the scientific culture and workplace to foster success for women men and the scientific enterprise Bound to spark a dialogue about how women will shape the future of western science this book is eye opening reading for anyone with an interest in the field In an era when women are being

encouraged to enter the sciences as never before Women Changing Science sounds a warning to science students science teachers parents legislators health science educators business people and university administrators **Why Science Is Sexist** Nicola Gaston,2015-11 In June 2015 Nobel Laureate Tim Hunt resigned from the Faculty of Life Sciences at University College London after making a dismissive remark about female scientists The incident is just the tip of the iceberg argues Nicola Gaston President of the New Zealand Association of Scientists She scrutinises the sexism afflicting the discipline of science from the under representation of women to the scientific argument that mental capabilities are gendered Ultimately she asks what can be done to combat unconscious bias in science and to ensure that the future of scientific inquiry is both balanced and objective Publisher information **Connecting Girls and Science** Elaine V. Howes,2002 Shows the positive results that can occur in secondary science classes when student s curiosity about science is brought to the centre of the curriculum In particular it demonstrates how girls can become more interested when such topics as childbirth and sexism in science are included
