Cattaneo, 1974 Based on information obtained from a review of the literature and from liaison with committees concerned with the development and revision of voluntary standards it was found that there is a dearth of research information contributing directly to the development of test methods Most of the research conducted on building components has been carried out either to observe the behavior of a sample of a particular type of construction or to evaluate the performance of a specimen against some performance requirements However helpful inferences can be made on the basis of some of the documentation especially that contained in reports of full scale tests on housing An up to date status report of voluntary test standards activities in the U S was prepared through verbal and written communication with members of the technical subcommittees of ASTM Committee E 6 on Performance of Building Construction *Design of Buildings for Fire Safety* E.
