Mössbauer Spectroscopy Applied to Inorganic Chemistry G.J Long,F. Grandjean,2013-11-11 In 1988 the Mossbauer effect community completed 30 years of continual contribution to the fields of nuclear physics solid state science and a variety of related disciplines To celebrate this anniversary Professor Gonser of the Universitat des Saarlandes has contributed a chapter to this volume on the history of the effect Although Mossbauer spectroscopy has reached its mature years the chapters in this volume illustrate that it is still a dynamic field of science with applications to topics ranging from permanent magnets to biological mineralization During the discussion of a possible chapter for this volume a potential author asked Do we really need another Mossbauer book The editors responded in the affirmative because they believe that a volume of this type offers several advantages First it provides the author with an opportunity to write a personal view of the subject either with or without extensive pedagogic content Second there is no artificially imposed restriction on length In response to the question How long should my chapter be we have responded that it should be as long as is necessary to clearly present explain and evaluate the topic In this type of book it is not necessary to condense the topic into two four or eight pages as is now so often a requirement for publication in the research literature

The NBS Alloy Data Center: Permuted Materials Index Institute for Materials Research (U.S.),Gesina C. Carter,1971 This Index contains literature references to 10 000 research papers on physical properties of metals and alloys The Index contains all NMR Knight shift papers and soft x ray emission papers It also contains many soft x ray absorption papers and a number of papers on generally related topics such as susceptibilities specific heats hyperfine fields and band structures The papers are annotated in depth and the coded information put onto a magnetic tape The Permuted Materials Index was created from this tape listing alloys under each of their constituent components i e CuNi appears under CuNi and under NiCu alloys
