The Nuclear Safety and Nuclear Security Interface: Approaches and National Experiences IAEA, 2021-03-30 This publication was developed from the exchange of information experiences and practices by participating Member States at the IAEA Technical Meeting on the Safety and Security Interface Approaches and National Experiences held in Vienna in 2018 It aims to provide a better understanding of the important elements of the interface between nuclear safety and nuclear security for facilities and activities and to highlight the challenges opportunities and good practices for its effective management when planning and implementing different programmes and activities **Nuclear Security** George P. Shultz, Sidney D. Drell, Henry A. Kissinger, Sam Nunn, 2014-09-01 Concern about the threat posed by nuclear weapons has preoccupied the United States and presidents of the United States since the beginning of the nuclear era Nuclear Security draws from papers presented at the 2013 meeting of the American Nuclear Society examining worldwide efforts to control nuclear weapons and ensure the safety of the nuclear enterprise of weapons and reactors against catastrophic accidents The distinguished contributors all known for their long standing interest in getting better control of the threats posed by nuclear weapons and reactors discuss what we can learn from past successes and failures and attempt to identify the key ingredients for a road ahead that can lead us toward a world free of nuclear weapons The authors review historical efforts to deal with the challenge of nuclear weapons with a focus on the momentous arms control negotiations between U S president Ronald Reagan and Mikhail Gorbachev They offer specific recommendations for reducing risks that should be adopted by the nuclear enterprise both military and civilian in the United States and abroad Since the risks posed by the nuclear enterprise are so high they conclude no reasonable effort should be spared to ensure safety and security Nuclear Security Michael Nacht, Michael Frank, Stanley Prussin, 2021-11-19 This textbook is the first comprehensive and systematic account of the science technology and policy issues associated with nuclear energy and nuclear weapons Throughout their account of the evolution of nuclear policy from its origin to the early Trump presidency the authors interweave clear technical expositions of the science and technology that underpin and constrain it The book begins by tracing the early work in atomic physics the discovery of fission and the developments that led to the Manhattan Project and the delivery of atomic bombs against Japan that ended World War II It follows the initial failed attempts at nuclear disarmament the onset of the Cold War nuclear arms competition and the development of light water reactors to harness nuclear energy for electric power generation The authors thoroughly unpack the problem of nuclear proliferation examining the strategy and incentives for states that have and have not pursued nuclear weapons and providing an overview of the nuclear arsenals of the current nuclear weapon states They trace the technical political and strategic evolution of deterrence arms control and disarmament policies from the first attempts for an Outer Space Treaty in 1957 through the new START treaty of 2009 At critical junctures in the narrative the authors explain the relevant nuclear science and technology including nuclear fission and criticality nuclear materials and

enrichment nuclear detonation and nuclear weapons effects nuclear weapons stockpile constraints stewardship and surveillance nuclear fusion and thermonuclear weapons technologies for monitoring verification and proliferation and nuclear forensics They conclude with an assessment of contemporary issues ranging from the Joint Comprehensive Plan of Action reached to halt Iran's nuclear weapons development program to the threat of nuclear terrorism the perceived nuclear weapons policies of Russia and China and the US efforts to provide disincentives for its allies to acquire their own nuclear weapons by maintaining credible security guarantees *Security During the Lifetime of a Nuclear Facility* IAEA,2024-04-30

This publication provides guidance to States competent authorities and operators on appropriate nuclear security measures during each stage in the lifetime of a nuclear facility from initial planning of the facility through to its final decommissioning The publication addresses effective nuclear security in the transition between stages and applies to the nuclear security of nuclear material and nuclear facilities throughout the lifetime of all types of nuclear facility Although focused on nuclear power the guidance contained in this publication may be useful for States developing nuclear programs with other types of facility including those for research and development *Terrorism* ,1979 *Nuclear Security Culture* Igor

Enhancing Nuclear Security Culture in Organizations Associated with Nuclear and Other Radioactive Material IAEA,2024-09-03 Nuclear security culture is an important component of an effective nuclear security regime as it serves as a tool to improve the performance of the human component at nuclear facilities and organizations to counter both insider and outsider threats Security culture connotes not only the technical proficiency of the people but also their awareness of security risks and motivation to follow established procedures comply with regulations and take the initiative when unforeseen circumstances arise A workforce made up of individuals who are vigilant who question irregularities execute their work diligently and exhibit high standards of personal and collective behaviour is able to achieve effective nuclear security Building upon this understanding of the importance of a strong nuclear security culture this publication provides practical guidance on how to implement a systematic nuclear security culture enhancement programme **Understanding and**

Managing Risk in Security Systems for the DOE Nuclear Weapons Complex National Research Council,Division on Earth and Life Studies,Nuclear and Radiation Studies Board,Committee on Risk-Based Approaches for Securing the DOE Nuclear Weapons Complex,2011-04-07 A nuclear weapon or a significant quantity of special nuclear material SNM would be of great value to a terrorist or other adversary It might have particular value if acquired from a U S facility in addition to acquiring a highly destructive tool the adversary would demonstrate an inability of the United States to protect its nuclear assets The United States expends considerable resources toward maintaining effective security at facilities that house its nuclear assets However particularly in a budget constrained environment it is essential that these assets are also secured

efficiently meaning at reasonable cost and imposing minimal burdens on the primary missions of the organizations that operate U S nuclear facilities It is in this context that the U S Congress directed the National Nuclear Security Administration NNSA a semi autonomous agency in the U S Department of Energy DOE responsible for securing nuclear weapons and significant quantities of SNM asked the National Academies for advice on augmenting its security approach particularly on the applicability of quantitative and other risk based approaches for securing its facilities In carrying out its charge the committee has focused on what actions NNSA could take to make its security approach more effective and efficient The committee concluded that the solution to balancing cost security and operations at facilities in the nuclear weapons complex is not to assess security risks more quantitatively or more precisely This is primarily because there is no comprehensive analytical basis for defining the attack strategies that a malicious creative and deliberate adversary might employ or the probabilities associated with them However using structured thinking processes and techniques to characterize security risk could improve NNSA s understanding of security vulnerabilities and guide more effective resource allocation

Controlling Threats to Nuclear Security James L. Ford, 1997 The collapse of the Soviet Union although providing a host of welcome opportunities for people of that nation also exacerbated a number of transnational concerns just as serious as those that emanated from the bipolar hostility of the previous 50 years Among these challenges is the marked increase in the theft of and illegal trafficking in nuclear materials often referred to as nuclear smuggling Prior to the early 1990s nuclear smuggling generally involved small quantities of bogus materials or at most nuclear associated materials that posed no serious danger to security Recently however several disturbing incidents involving kilogram quantities of sensitive nuclear materials suitable for constructing bombs have occurred No one doubts that hostile groups could conceivably bring weapons usable nuclear material into the United States Moreover nuclear smuggling represents a possible shortcut for states such as Iran seeking plutonium or highly enriched uranium for their weapons program The consequences of such states succeeding would be profound

South Asia's Nuclear Security Bhumitra Chakma, 2014-12-17 South Asia is often viewed as a potential nuclear flashpoint and a probable source of nuclear terrorism But how valid are such perceptions This book seeks to address this question and assesses the region s nuclear security from two principal standpoints First it evaluates the robustness of the Indo Pakistani mutual deterrence by analysing the strength and weaknesses of the competing arguments regarding the issue It also analyses the causes and consequences of nuclear arms race between India and Pakistan the nature of deterrence structure in the region and the challenges of confidence building and arms control between the two countries in order to assess the robustness of South Asia s nuclear deterrence Second it assesses the safety and security of the nuclear assets and nuclear infrastructure of India and Pakistan The author holds that the debate on South Asia s nuclear security is largely misplaced because the optimists tend to overemphasise the stabilising effects of nuclear weapons and the pessimists are too alarmists It is argued that while the risks of nuclear weapons are significant it is unlikely that India and

Pakistan will give up their nuclear arsenals in the foreseeable future Therefore what needs to happen is that while nuclear elimination should be the long term goal in the interim years the two countries need to pursue minimum deterrence policies to reduce the likelihood of deterrence failure and the possibility of obtaining fissile materials by non state actors
