*US Nuclear Submarines* Jim Christley, 2012-01-20 The adoption of nuclear power revolutionized submarine design Vessels can stay underwater for months trailing the enemy or training weapons on land targets from secret positions always there never seen Jim Christley a former submariner explores here the influence of Admiral Hyman Rickover in cautiously introducing these stealthy machines of war and frankly discusses the power and perils of using nuclear reactors at sea Using unique and detailed artwork he outlines the many evolving aspects of design within the submarine classes from the very first nuclear submarine USS Nautilus to the classes under construction even now *Nautilus to Columbia* James C.

Goodall, 2023-11-23 A highly illustrated history of the US Navy's nuclear submarine program from the postwar years to the 2020 Columbia class SSBNs James C Goodall covers the origins design and development of the US Navy's fleet of nuclear powered submarines This program was developed under the command of Hiram G Rickover the Father of the Nuclear Navy who oversaw the commissioning of the very first nuclear powered attack submarine the USS Nautilus SSN 571 in 1952 This was a truly revolutionary design Until the advent of nuclear power the world's submarine fleets traveled on the surface at night to charge their batteries and only dove below the surface when enemy ships or planes were spotted With the development of the USS Nautilus the US Navy now had the ability to stay submerged for not just hours or days but to hide out of harm's way for weeks or months at a time This highly illustrated book covers all of the 220 submarine hulls built and delivered to the US Navy from the USS Nautilus through to the Navy's newest class of submarine the Columbia class SSBNs The story of the Nuclear Navy from its origins up to the present day is told through more than 1 300 images from official and archive sources as well as the author's own personal collection some of which have never been published before **Nuclear**

Soviet Cold War Attack Submarines Edward Hampshire, 2020-09-17 In this highly detailed book naval historian Edward Hampshire reveals the fascinating history of the nuclear powered attack submarines built and operated by the Soviet Union in the Cold War including each class of these formidable craft as they developed throughout the Cold War period The November class which were the Soviet Union's first nuclear submarines had originally been designed to fire a single enormous nuclear tipped torpedo but were eventually completed as boats firing standard torpedoes The Alfa class were perhaps the most remarkable submarines of the Cold War titanium hulled which was light and strong but extremely

expensive and difficult to weld successfully crewed with only thirty men due to considerable automation and 30% faster than any US submarines they used a radical liquid lead bismuth alloy in the reactor plant The Victor class formed the backbone of the Soviet nuclear submarine fleet in the 1970s and 1980s as hunter killer submarines began to focus on tracking and potentially destroying NATO ballistic missile submarines The Sierra classes were further titanium hulled submarines and the single Mike class submarine was an experimental type containing a number of innovations Finally the Akula class were being constructed as the Cold War ended and these boats form the mainstay of the Russian nuclear attack submarine fleet today This book explores the design development and deployment of each of these classes in detail offering an unparalleled insight into the submarines which served the Soviet Union throughout the Cold War period The text is supported by stunning illustrations photographs and diagrams of the submarines      *The Nuclear Submarine Force--past, Present and Future* United States.
