Nuclear Tipping Point Why States Reconsider Their Nuclear Choices:

The Nuclear Tipping Point Kurt M. Campbell, Robert J. Einhorn, Mitchell B. Reiss, 2005-06-22 More than half a century after the advent of the nuclear age is the world approaching a tipping point that will unleash an epidemic of nuclear proliferation Today many of the building blocks of a nuclear arsenal scientific and engineering expertise precision machine tools software design information are more readily available than ever before The nuclear pretensions of so called rogue states and terrorist organizations are much discussed But how firm is the resolve of those countries that historically have chosen to forswear nuclear weapons A combination of changes in the international environment could set off a domino effect with countries scrambling to develop nuclear weapons so as not to be left behind or to develop nuclear hedge capacities that would allow them to build nuclear arsenals relatively quickly if necessary The Nuclear Tipping Point examines the factors both domestic and transnational that shape nuclear policy The authors distinguished scholars and foreign policy practitioners with extensive government experience develop a framework for understanding why certain countries may originally have decided to renounce nuclear weapons and pinpoint some more recent country specific factors that could give them cause to reconsider Case studies of eight long term stalwarts of the nonproliferation regime Egypt Germany Japan Saudi Arabia South Korea Syria Turkey and Taiwan flesh out this framework and show how even these countries might be pushed over the edge of a nuclear tipping point The authors offer prescriptions that would both prevent such countries from reconsidering their nuclear option and avert proliferation by others The stakes are enormous and success is far from assured To keep the tipping point beyond reach the authors argue the international community will have to act with unity imagination and strength and Washington's leadership will be essential Contributors include Leon Feurth George Wash The Ethics of Nuclear Weapons Dissemination Thomas E. Doyle, II, 2015-02-11 Offers an original and timely contribution to the nuclear ethics debate Examines the moral dilemmas of state and non state actor nuclear proliferation Will be of much interest to students of nuclear proliferation ethics international relations and international security *Historical Dictionary of the Kennedy-Johnson Era* Richard Dean Burns, Joseph M. Siracusa, 2015-05-07 The recent commemoration of the fiftieth anniversary of John F Kennedy's election as the thirty fifth president of the United States serves as a reminder of a period of time that many Americans perceive as idyllic Just as his election despite a near run thing had instilled a pervasive sense of hope throughout the country his assassination stunned the entire nation scarring the psyche of a generation of Americans More than half a century later JFK continues to inspire debates about the effectiveness of the presidency as well as his own political legacy making the senator from Massachusetts the object of many enduring myths that he would have been one of the country's greatest leaders had he lived he would have kept the US out of a full fledged Vietnam war and that he was a martyr of right wing assassins His successor Lyndon B Johnson who did get the US deeply involved in Vietnam while pursuing the social reforms of the Great Society at home and abroad also casts a long shadow in the twenty first century as

the nation continues to deal with poverty racism and social injustice This second edition of Historical Dictionary of the Kennedy Johnson Era covers its history through a chronology an introductory essay appendixes and an extensive bibliography The dictionary section has over 300 cross referenced entries on important personalities including the president his advisors his family his opponents and his critics as well as members of Congress military leaders and international leaders This book is an excellent access point for students researchers and anyone wanting to know more about John F Kennedy

The Future of Arms Control Michael A. Levi, Michael E. O'Hanlon, 2004-12-07 Arms control for decades at the core of the foreign policy consensus today is among the more contentious issues in American politics It is pilloried and considered out of mode in many conservative quarters while being viewed as nearly sacrosanct in many liberal circles In this new book Michael Levi and Michael O Hanlon argue that neither the left nor the right has a correct view of the proper utility of arms control in the age of terror Arms control in the traditional sense lengthy treaties to limit nuclear and other military competitions among the great powers is no longer particularly useful Nor should arms control be pursued as a means to the end of constraining the power of nations or of promoting global government It is still a critical tool though for controlling dangerous technologies particularly those that in the hands of hostile states or terrorist organizations could cause massive death and destruction Arms control and coercive action including military force must be integrated into an overall strategy for preventing proliferation now more than ever before Arms control should be used to gain earlier warning of illicit activities inside dangerous states allowing the international community to take coercive action in a timely way The authors propose three new criteria to guide future arms control efforts designed to respond to today's geopolitical realities Arms control must focus on the dangers of catastrophic technology not so much in the hands of major powers as of small states and terrorist groups Their criteria lead to a natural focus on nuclear and biological technologies Much tougher measures to prevent countries from gaining nuclear weapons technology while purportedly complying with the Nuclear Non Proliferation Treaty and procedures for controlling dangerous biological technologies will be most prominent in this framework while lower priority is given to efforts such as bilateral nuclear accords and most t
