The Nuclear Suppliers and Nonproliferation. International Policy Choices. RODNEY W. JONES, CEMARE MERLINI, JOSEPH F. PELAT, and WILLIAM C. POTTER, Eds. Lexington (Heath), Lexington, MA, 1985. xvi, 255 pp. \$32. From a seminar, Washington, DC, June 1984.

The Nuclear Connection. A Reassessment of Nuclear Power and Nuclear Proliferation. ALVIN WEINBERG, MARCELO ALONSO, and JACK N. BARKENBUS, Eds. Paragon House, New York, 1985. viii, 295 pp., illus. \$27.95; paper, \$19.95. A Washington Institute Book.

The recent conclusion of the third review conference of the Treaty on the Non-Proliferation of Nuclear Weapons (NPT) is a timely occasion for a reevaluation of international efforts to impede the spread of nuclear weapons to additional countries, which continues to be one of the most critical challenges to international security. Though the books being reviewed largely cover old ground, they provide new perspectives on certain nuclear supply questions and on the relationship between civil nuclear electric generation and nuclear weapons and thus contribute to the large body of literature on this important subject.

The Nuclear Suppliers and Nonproliferation provides new insights into the growing problem of "second tier" or emerging suppliers, those states that have recently become capable of supplying nuclear materials, equipment, or technology. The best paper on the subject, by Lewis Dunn, puts a potentially serious problem in perspective, eschewing the alarmist view. Some commentators have predicted that the new suppliers will undermine international efforts to assure that exported nuclear materials are only used for peaceful purposes by making exports that are not subject to international controls. To date, Third World countries with advanced nuclear programs, such as India, have been fairly circumspect in their nuclear dealings with other countries. Moreover, progress has been made recently in getting some emerging suppliers to require that their nuclear exports meet international standards. South Africa (which has vast uranium reserves and a uranium enrichment plant) has announced that it will require the same controls on its nuclear exports as are required by the existing members of the "London Suppliers Group." China has also recently announced that it will require international inspection under the "safeguards" system of the International Atomic Energy Agency on all its nuclear exports, a welcome development if China actually matches those

words with more responsible behavior in its nuclear commerce than it has shown in the recent past.

The book also contains good regional overviews of nuclear supply issues in South Asia, by Rodney Jones, and in Latin America, by Daniel Poneman. Poneman's paper contains a useful proposal for greater reliance on the Latin American nuclear-free-zone treaty (the Treaty of Tlatelolco) to reduce proliferation risks on that continent. The papers in the book on national export policies are self-congratulatory and contain little that is new. An exception is a paper on the Canadian perspective by Mark Moher, with its lucid advocacy of a policy of genuine "full-scope" IAEA safeguards (that is, a requirement that as a precondition of nuclear cooperation the recipient state must enter into a treaty obligation to place all its nuclear facilities under IAEA safeguards). Moher points out the risks of reliance on ad hoc policies and emphasizes the dangers of supplying nuclear materials and equipment with the hope, but without binding assurances, that the recipient nation will forgo nuclear weapons.

Disappointingly, the book only mentions in passing the recent negotiation of major improvements in the international "trigger lists." These lists specify the items that cannot be exported unless the supplier has received assurances that IAEA safeguards will be applied. The elaboration of the trigger lists to deal more effectively with centrifuge uranium enrichment and spent fuel reprocessing technologies is a major accomplishment of which the United States and other concerned governments should be proud. Though obvious limits are imposed by confidentiality, some details of these negotiations would have provided a valuable case study of the need for supplier cooperation to prevent the establishment of unsafeguarded sensitive nuclear facilities, and of the practical and political limits on such cooperation. There are similarly no details on new issues concerning the control of supplies, such as "dual-use" technologies, heavy-water production, and advanced uranium enrichment technologies. For a book on nuclear supply issues, these are serious lapses.

Similarly, despite excellent but brief overviews by Charles Van Doren and Joseph Nye, which point out some of the policy complexities of nuclear supply issues, and a thoughtful presentation of the nuclear industry's perspective by Myron Kratzer, there is relatively little attempt to develop a theory of supplier controls. Such controls can delay but cannot ultimately prevent indigenous development of nuclear facilities that might contribute to a nuclear weapons program.

Supplier controls have value primarily if they are used to induce prospective recipients to agree to nonproliferation measures such as adherence to the NPT or the Treaty of Tlatelolco. Supplier controls have effectively induced such agreement in numerous cases in the past. Alternatively, supplier controls can force delays in unsafeguarded programs, particularly those involving sensitive technologies. The partial success of concerted efforts by the nuclear suppliers to deny parts to Pakistan's unsafeguarded centrifuge enrichment and reprocessing programs demonstrates that such cooperation can indeed cause delays and thus buy valuable time during which positive political measures or sanctions can be brought to bear.

The intended common theme of *The Nuclear Connection* is "nuclear power's potential linkage to weapons production." Most observers have long rejected the two extreme positions on the relationship between the two: that nuclear power is tantamount to weapons proliferation or that nuclear power has nothing to do with nuclear weapons. The relationship was discussed ad nauseam during the International Nuclear Fuel Cycle Evaluation, and the book adds relatively little to INFCE's conclusions. The book would have been greatly improved by case studies analyzing the countries that are currently thought to pose dangers of proliferation—something INFCE did not do. Such country-specific case studies would demonstrate that in the past 30 years nuclear material and facilities obtained for ostensibly peaceful purposes have contributed directly to known or suspected nuclear weapons programs in certain countries but not to those in other countries; that the existence of legitimate nuclear power programs has sometimes served as a "cover" for the acquisition of other technologies that are intended for nonpeaceful purposes; and that expertise developed in certain nominally peaceful programs (for example, in plutonium handling and chemistry) can be useful in but is not sufficient for the development of a weapons program.

A paper on the commercial prospects of nuclear power by Peter Aver, Marcelo Alonso, and Jack Barkenbus demonstrates a new realization, uncommon as recently as INFCE, that as a result of increased finds of uranium and reductions in demand for it, there is enough uranium to run 1000 reactors of 1000 megawatt electrical output for 50 years. This gives the international community additional time, perhaps several decades, before relatively more dangerous activities such as the reprocessing and recycling of plutonium could be justified on economic grounds.
