Nuclear Wastelands A Global Guide To Nuclear Weapons Production:

Nuclear Wastelands International Physicians for the Prevention of Nuclear War, Institute for Energy and Environmental Research, 2000 A handbook for scholars students policy makers journalists and peace and environmental activists A handbook for scholars students policy makers journalists and peace and environmental activists *Nuclear Wastelands* provides concise histories of the development of nuclear weapons programs of every declared and de facto nuclear weapons power as well as detailed surveys of the health and environmental effects of this development both in these countries and in non nuclear nations involved in nuclear weapons testing and uranium mining Among the more obvious but largely deferred costs of the Cold War are those related to the management of radioactive waste The world is burdened with thousands of unwanted nuclear devices and mounting surpluses of weapons grade plutonium and enriched uranium In addition the process of weapons production and testing has left many lands aquifers rivers lakes and seas contaminated by a multitude of weapons related poisons This book follows the production process step by step and country by country from uranium mining to the final assembly and storage of weapons analyzing the potential hazards of each step and compiling the most complete information available on the actual health and environmental effects in each country involved *Nuclear Wastelands* includes a wealth of information that has only recently come to light particularly on the nuclear weapons program of the former Soviet Union It also features critical analyses of official public communications concerning the health and environmental consequences of nuclear weapons production bringing to light governmental secrecy and outright deception that have led to the subversion of democratic principles and have camouflaged the damage done to the very people and lands the weapons were meant to safeguard

Nuclear Desire Shampa Biswas, 2014-09-01 Since its enactment in 1970 the Nuclear Non Proliferation Treaty NPT has become one node of a massive sprawling multibillion dollar regime that is considered essential to slowing the proliferation of nuclear weapons and weapons technology However according to Shampa Biswas these well intentioned efforts to halt the spread of nuclear weapons deflect attention from a hierarchical global nuclear order dominated by powerful states and capitalist interests that benefit from the status quo In *Nuclear Desire* Biswas proposes that pursuit and production of nuclear power is sustained by this unequal global order whose persistent and daily harmful effects are experienced by some of the most vulnerable bodies around the world Making a compelling case for

nuclear abolition she shows that the path to nuclear zero is more successfully traversed through the perspective of postcolonialism and the political economy of injustice rather than through the prism of security In the end the nonproliferation regime maintains a hierarchy of haves and have nots one that reinforces inequalities that run counter to the NPT's broader goal Innovative forcefully argued and long overdue Nuclear Desire moves beyond conventional critiques to give scholars and students of international relations new insights into how a more secure world might simultaneously be more peaceful and just

The Great Acceleration J. R. McNeill, Peter Engelke, 2016-04-04 The Earth has entered a new age the Anthropocene in which humans are the most powerful influence on global ecology Since the mid twentieth century the accelerating pace of energy use greenhouse gas emissions and population growth has thrust the planet into a massive uncontrolled experiment The Great Acceleration explains its causes and consequences highlighting the role of energy systems as well as trends in climate change urbanization and environmentalism More than any other factor human dependence on fossil fuels inaugurated the Anthropocene Before 1700 people used little in the way of fossil fuels but over the next two hundred years coal became the most important energy source When oil entered the picture coal and oil soon accounted for seventy five percent of human energy use This allowed far more economic activity and produced a higher standard of living than people had ever known but it created far more ecological disruption We are now living in the Anthropocene The period from 1945 to the present represents the most anomalous period in the history of humanity's relationship with the biosphere Three quarters of the carbon dioxide humans have contributed to the atmosphere has accumulated since World War II ended and the number of people on Earth has nearly tripled So far humans have dramatically altered the planet's biogeochemical systems without consciously managing them If we try to control these systems through geoengineering we will inaugurate another stage of the Anthropocene Where it might lead no one can say for sure

The Theater of Operations Joseph Masco, 2014-12-01 How did the most powerful nation on earth come to embrace terror as the organizing principle of its security policy In The Theater of Operations Joseph Masco locates the origins of the present day U S counterterrorism apparatus in the Cold War's balance of terror He shows how after the attacks of 9 11 the U S global War on Terror mobilized a wide range of affective conceptual and institutional resources established during the Cold War to enable a new planetary theater of operations Tracing how specific aspects of emotional management existential danger state secrecy and threat awareness have evolved as core aspects of the American social contract Masco draws on archival media and ethnographic resources to offer a new portrait of American national security culture Undemocratic and unrelenting this counterterror state prioritizes speculative practices over facts and ignores everyday forms of violence across climate capital and health in an unprecedented effort to anticipate and eliminate terror threats real imagined and emergent

Global Ethics and Environment Nicholas Low, 2002-09-11 As global capitalism expands and reaches ever further corners of the world practical problems continue to escalate and repercussions become increasingly

serious and irreversible These practical problems carry with them equally important and ethical issues Global Ethics and Environment explores these ethical issues from a range of perspectives and using a wide range of case studies Chapters focus on the impact of development in new industrial regions the ethical relationship between human and non human nature the application of ethics in different cultural and institutional contexts environmental injustice in the location of hazardous materials and processes the ethics of the impact of a single event Chernobyl on the global community the ethics of transitional institutions This collection will both stimulate debate and provide an excellent resource for wide ranging case study material and solid academic context
