Object Oriented Metamethods:

Object-Oriented Metamethods B. Henderson-Sellers, A. Bulthuis, 2012-12-06 Object technology is maturing rapidly One sign of that is the formality of the discussions that occur all around the world at conferences in newsgroups in industry developer groups and in academe One face of formality is metamodelling seeking the model of the model that gives the rules by which the model itself is constructed In OT terms it means seeking the underpinning rules in a methodology in which for instance it is suggested we depict an aggregate structure using one particular notation The questions that need answering are the semantics of that relation ship and the constraints i e when and how it is allowable and what values constructs are not admissible In the past these rules and constraints have been merely written down in textbooks and methodology manuals Unfortunately despite the plethora of authoring and word processing programs available this leads to inconsistencies when cross checks are not assiduously undertaken There are few explicit signs of metamodels in the published OOAD texts In this book we describe how we found those metamodels implicitly written into the methods We formalized each of these in exactly the same way using the same metalevel concepts and metarelationships This book describes the fruits of those metamodelling labours which we undertook as objectively as possible in 1995 In 1996 we then worked with the individual methodologists to ensure that we had not misinterpreted any particular metamodels *Handbook on Architectures of Information Systems* Peter Bernus, Kai Mertins, Günter Schmidt, 2006-04-18 An authoritative source about methods languages methodologies and supporting tools for constructing information systems that also provides examples for references models Its strength is the careful selection of each of the above mentioned components based on technical merit The second edition completely revises all articles and features new material on the latest developments in XML UML The structure follows the definition of the major components of Enterprise Integration as defined by GERAM Generalised Enterprise Reference Architecture and Methodology 1st edition sold about 600 copies since January 2003 **Object-Based Distributed**

Programming Rachid Guerraoui, Oscar Nierstrasz, Michel Riveill, 1994-05-27 Interest has grown rapidly over the past dozen years in the application of object oriented programming and methods to the development of distributed open systems This volume presents the proceedings of a workshop intended to assess the current state of research in this field and to facilitate interaction between groups working on very different aspects of object oriented distributed systems The workshop was held as part of the 1993 European Conference on Object Oriented Programming ECOOP 93 Over fifty people submitted position papers and participated in the workshop and almost half presented papers The presented papers were carefully reviewed and revised after the workshop and 14 papers were selected for this volume **Beginning Lua with World of Warcraft**

Intelligent Strategies for Meta Multiple Criteria Decision Making Thomas Hanne, 2012-12-06 Multiple criteria decision making research has developed rapidly and has become a main area of research for dealing with complex decision problems which require the consideration of multiple objectives or criteria Over the past twenty years numerous multiple criterion decision methods have been developed which are able to solve such problems However the selection of an appropriate method to solve a particular decision problem is today's problem for a decision support researcher and decision maker Intelligent Strategies for Meta Multiple Criteria Decision Making deals centrally with the problem of the numerous MCDM methods that can be applied to a decision problem The book refers to this as a meta decision problem and it is this problem that the book analyzes The author provides two strategies to help the decision makers select and design an appropriate approach to a complex decision problem Either of these strategies can be designed into a decision support system itself One strategy is to use machine learning to design an MCDM method This is accomplished by applying intelligent techniques namely neural networks as a structure for approximating functions and evolutionary algorithms as universal learning methods The other strategy is based on solving the meta decision problem interactively by selecting or designing a method suitable to the specific problem for example the constructing of a method from building blocks This strategy leads to a concept of MCDM networks Examples of this approach for a decision support system explain the possibilities of applying the elaborated techniques and their mutual interplay The techniques outlined in the book can be used by researchers students and industry practitioners to better model and select appropriate methods for solving complex multi objective decision problems

ECOOP '93 - Object-Oriented Programming Oscar M. Nierstrasz, 2003-05-16 It is now more than twenty five years since object oriented programming was invented actually more than thirty years since work on Simula started but by all accounts it would appear as if object oriented technology has only been discovered in the past ten years When the first European Conference on Object Oriented Programming was held in Paris in 1987 I think it was generally assumed that Object Oriented Programming like Structured Programming would quickly enter the vernacular and that a conference on the subject would rapidly become superfluous On the contrary the range and impact of object oriented approaches and methods continues to expand and spite the inevitable oversell and hype object oriented technology has reached a level of scientific maturity that few could have foreseen ten years ago Object oriented technology also cuts across scientific cultural boundaries like perhaps no other field of computer science as object oriented concepts can be applied to virtually all the other areas and affect virtually all aspects of the software life cycle So in retrospect emphasizing just Programming in the name of the conference was perhaps somewhat short sighted but at least the acronym is pronounceable and easy to remember This year's ECOOP attracted 146 submissions from around the world making the selection process even tougher than usual The selected papers range in topic from programming language and database issues to analysis and design and reuse and from experience reports to theoretical contributions

Advances in Information Systems Tatyana Yakhno, 2003-06-26 This volume contains the proceedings of the First International Conference on Advances in Information Systems ADVIS held in Izmir Turkey 25-27 October 2000 This conference was dedicated to the memory of Professor Esen Ozkarahan He was great researcher who made an essential contribution to the development of information systems This conference was organized by the Computer Engineering Department of Dokuz Eylul University of Izmir This department was established in 1994 by the founding chairman Professor Ozkarahan and there he worked for the last five years of his life The main goal of the conference was to bring together researchers from all around the world working in different areas of information systems to share new ideas and to represent their latest results We received 80 submissions from 30 countries The Program Committee selected 44 papers for presentation at the conference The invited and accepted contributions cover a large variety of topics: general aspects of information systems data bases data warehousing computer networks Internet technologies content based image retrieval information retrieval constraint programming and artificial intelligence The success of the conference was dependent upon the hard work of a large number of people We gratefully acknowledge the members of the Program Committee who helped to coordinate the process of refereeing all submitted papers We also thank all the other
