Time-Predictable Architectures Christine Rochange,Pascal Sainrat,Sascha Uhrig,2014-01-17 Building computers that can be used to design embedded real time systems is the subject of this title Real time embedded software requires increasingly higher performances The authors therefore consider processors that implement advanced mechanisms such as pipelining out of order execution branch prediction cache memories multi threading multicorearchitectures etc The authors of this book investigate the timepredictability of such schemes **Transactional Memory. Foundations, Algorithms, Tools, and Applications** Rachid Guerraoui,Paolo Romano,2014-12-29 The advent of multi core architectures and cloud computing has brought parallel programming into the mainstream of software development Unfortunately writing scalable parallel programs using traditional lock based synchronization primitives is well known to be a hard time consuming and error prone task mastered by only a minority of specialized programmers Building on the familiar abstraction of atomic transactions Transactional Memory TM promises to free programmers from the complexity of conventional synchronization schemes simplifying the development and verification of concurrent programs enhancing code reliability and boosting productivity Over the last decade TM has been subject to intense research on a broad range of aspects including hardware and operating

systems support language integration as well as algorithms and theoretical foundations On the industrial side the major players of the software and hardware markets have been up front in the research and development of prototypal products providing support for TM systems This has recently led to the introduction of hardware TM implementations on mainstream commercial microprocessors and to the integration of TM support for the world s leading open source compiler In such a vast inter disciplinary domain the Euro TM COST Action IC1001 has served as a catalyzer and a bridge for the various research communities looking at disparate yet subtly interconnected aspects of TM This book emerged from the idea having Euro TM experts compile recent results in the TM area in a single and consistent volume Contributions have been carefully selected and revised to provide a broad coverage of several fundamental issues associated with the design and implementation of TM systems including their theoretical underpinnings and algorithmic foundations programming language integration and verification tools hardware supports distributed TM systems self tuning mechanisms as well as lessons learnt from building complex TM based applications

Privatizing Eastern Europe J.M. Van Brabant,2012-12-06 This volume is meant to be a modest contribution to the ongoing debate about the transitions away from the administrative planning environment typical of the former communist regimes The central subject matter is a fairly special one namely the privatization of these economies together with the restoration and effective monitoring of property rights These are paramount tasks of the ongoing transformations once progress toward pOlitical democracy is secured Though I would not allot divestment of existing state owned assets the kind of pivotal importance that some observers reserve for it changing rules on the utilization of these assets is evidently at the core of what the transition toward market based economic systems should be all about Rather than examining the entire range of issues that surround the controversy on privatization this volume is primarily concerned with the economics of taking the state out of the decision making about existing assets Among the several aspects of this discussion three stand out One is the establishment of clear property rights This is fundamental to minimize trans action costs in an environment where decisions will increasingly be taken by independent economic agents acting on their own account Second I look only incidentally at the various angles of creating capital markets particularly for existing assets in these economies
