Tsendin, 2006-04-11 This book resulted from the NATO Advanced Research Workshop on Electron Kinetics and Applications of Glow Discharges held in St Petersburg Russia on May 19 23 1997 Glow discharges have found widespread applications in many technological processes from the manufacture of semiconductors to recent developments in na technology to the traditional fields of gas lasers and discharge lamps Consequently the interest in the physics of glow discharges has experienced yet another resurgence of interest While the non equilibrium character of glow discharges is widely accepted the opinion still prevails that the main features can be captured by fluid models and that kinetic treatments are only required for the understanding of subtle details The erroneousess of this belief is demonstrated by the failure of fluid models to describe many basic features of glow discharges such as for instance electrode phenomena striations and collisionless heating effects An adequate description of glow discharges thus has to be of kinetic nature **Advances in Heat Transfer** James P. Hartnett, 2007-10-09 Advances in Heat Transfer fills the information gap between regularly scheduled journals and university level textbooks by providing wide ranging and in depth review articles Put simply this book is essential reading for all mechanical chemical and industrial engineers working in the field of heat transfer in graduate schools or industry The articles which serve as a broad review for experts in the field will also be of great interest to non specialists who need to keep up to date with the results of the latest research Provides an overview of review articles on topics of current interest Bridges the gap between academic researchers and practitioners in industry A long running and prestigious series Proceedings of the 3rd International Conference on Electronic Engineering and Renewable Energy Systems Hajji Bekkay, Adel Mellit, Antonio Gagliano, Abdelhamid Rabhi, Mohammed Amine Koulali, 2023-04-11 This book includes papers presented at the 3rd International Conference on Electronic Engineering and Renewable Energy ICEERE 2022 which focus on the application of artificial intelligence techniques emerging technology and the Internet of things in electrical and renewable energy systems including hybrid systems micro grids networking smart health applications smart grid mechatronics and electric vehicles It particularly focuses on new renewable energy technologies for agricultural and rural areas to promote the development of the Euro Mediterranean region Given its scope
