Radio carbon: Calibration and Prehistory

Edited by
Trevor Watkins

The technical complexities of C-14 dating can battle archaeologists.

This book attempts their rescue. It is by specialists for non-specialists.

The realisation that the production rate of C-14 in the atmosphere was not constant undermined the assumption that C-14 years could be equated with calendar years.

Correction by calibration with cross-dated tree-ring radio-carbon samples offers hope, but creates 'correction curves' of bewildering variety.

This book explains the issues clearly and simply, provides valuable comparative data, assesses the reliability of the methods, tells how to take a sample, and where to send it for dating.
