The Microwave Debate Nicholas Hans Steneck, 1984 Antennas power lines microwave ovens color TVs VDTs radar and the RF sealers used in many industries may or may not cause harmful physical effects In this book Nicholas Steneck takes an objective look at the multifaceted and still unresolved debate involving government the public and industry over the safety and use of microwaves and radio frequency radiation In the process he raises important issues of conflicting values vested interests and scientific uncertainty Steneck traces the origins of the debate to the 1930s when scientific research concentrated on the therapeutic thermal aspects of radio frequency radiation and he also covers such recent aspects of the story as the irradiation of the U S Embassy in Moscow and the continuing controversies over the siting of satellite communication antennas Nicholas H Steneck is Professor of History and Director of the Collegiate Institute for Values and Science at the University of Michigan

Biological Effects and Dosimetry of Nonionizing Radiation Martino Gandolfo, 2013-11-11 During the last 35 years there has been considerable development and increase in the number of devices that emit nonionizing radiant energies These energies such as radiofrequency including microwaves are used in all sectors of our society for military industrial telecommunications medical and consumer applications This increase in sources of nonionizing radiant energies has resulted in growing interest on the part of government regulatory agencies industrial and military physicians research workers clinicians and environmentalists Although there is information on biologic effects and potential hazards to man from exposure to microwave radiofrequency energies considerable confusion and misinformation has permeated not only the public press but also some scientific and technical publications Because of the complexity of the interactions of nonionizing radiation in biological systems an interdisciplinary approach is necessary to assess and elucidate the problems that evolve as this field advances and as the use of these energies expands It is important to maintain a proper perspective and assess realistically the biomedical effects of these radiant energies so that the worker or general public will not be unduly exposed nor will research development and beneficial utilization of these energies be hampered or restricted by an undue concern for effects which may be nonexistent or minimal in comparison to other environmental hazards
