The Wrist Gontran Sennwald, 2012-12-06 In the space of only a few years reconstructive surgery of the skeleton of the hand has become a focus of attention The reason for this has been the advent of principles and techniques of stable internal fixation the unparalleled advantages of which are particularly evident in the treatment of the complex multi structural lesions so typical of injuries of the hand and also in procedures such as replantation or revascularisation What a striking contrast on the other hand is to be seen in the slow and painful progress made in our understanding of the biomechanics of the radiocarpal joint This is most eloquently illustrated by the embryonic state of prosthetic surgery of the wrist compared with the sophisticated advances made in hip and knee surgery Yet it is undeniable that painful conditions involving dysfunctions

of the wrist are increasing in number and affect young people in particular this should spur us on to seek more effective therapeutic solutions

The second English language edition of the Small Fragment Set Manual was enthusiastically received and quickly went into a second printing In preparing a third edition we found it necessary to revise the text extensively and partly restructure it The reasons for this are numerous Experience of recent years has brought technical refinements in the operative treatment of many types of small fracture Many of these changes stem from the small fragment set training programs conducted in Switzerland since 1980 and also from courses and symposia that have been held in other European countries and the United States These events were occasions for a fruitful exchange of experience with surgeons who were critical of our methods As a result of this exchange we perceived a need both to revise our indications and to give greater attention to alternative techniques We also felt it necessary to respond to criticisms of the first two editions concerning the catalog like instrument lists and illustrations and the attention given to fundamental techniques Many surgeons who work or would like to work with small implants especially those practicing abroad are inexperienced in operations on the larger bones It is imperative that these colleagues be given a basic introduction to the biomechanical thinking of the Swiss Association for the Study of Internal Fixation ASIF The Cumulative Book Index ,1989
