The Rainbow of Delta Tau Delta, 1913 **The Paraclete and Mahdi Or the Exact Testimony of Science to Revelations and Exposition of the Most Ancient Mysteries and Cults ...** John Locke Estens, 1912 *Rainbow Road* Sangharakshita, 2013-09-27 At the age of sixteen Dennis Lingwood discovered that he was and always had been a Buddhist This realization was to act as the motive force behind a life in which Lingwood now better known as Sangharakshita has played a major part in the introduction of Buddhism to the West The Rainbow Road traces Sangharakshita's development from a childhood dominated by illness and books to homeless wandering and ordination as a Buddhist monk The Rainbow Road is a remarkable and refreshingly candid record of a journey of spiritual exploration **Rainbow And The Worm, The: The Physics Of Organisms (2nd Edition)** Mae-wan Ho, 1998-08-06 This highly unusual book is a serious inquiry into Schrödinger's question What is life and at the same time a celebration of life itself It takes the reader on a voyage of discovery through many areas of contemporary physics from non equilibrium thermodynamics and quantum optics to liquid crystals and fractals all necessary for illuminating the problem of life In the process the reader is treated to a rare and

exquisite view of the organism gaining novel insights not only into the physics but also into the poetry and meaning of being alive This book is intended for all who love the subject

Writing Our Extinction Patrick Whitmarsh,2023-04-11 Mid twentieth century developments in science and technology produced new understandings and images of the planet that circulated the globe giving rise to a modern ecological consciousness but they also contributed to accelerating crises in the global environment including climate change pollution and waste In this new work Patrick Whitmarsh analyzes postwar narrative fictions that describe depict or express the earth from above the aerial and below the subterranean revealing the ways that literature has engaged this history of vertical science and linked it to increasing environmental precarity up to and including the extinction of humankind Whitmarsh examines works by writers such as Don DeLillo Karen Tei Yamashita Reza Negarestani and Colson Whitehead alongside postwar scientific programs including the Space Race atmospheric and underground nuclear testing and geological expeditions such as Project Mohole which attempted to drill to the earth's mantle As Whitmarsh argues by focusing readers attention on the fragility of postwar life through a vertical lens Anthropocene fiction highlights the interconnections between human behavior and planetary change These fictions situate industrial history within the much longer narrative of geological time and reframe scientific progress as a story through which humankind writes itself out of existence

Occupy Pynchon Sean Carswell,2017-05 Occupy Pynchon examines power and resistance in the writer's post Gravity's Rainbow novels As Sean Carswell shows Pynchon's representations of global power after the neoliberal revolution of the 1980s shed the paranoia and metaphysical bent of his first three novels and share a great deal in common with the work of Michael Hardt and Antonio Negri's critical trilogy Empire Multitude and Commonwealth In both cases the authors describe global power as a horizontal network of multinational corporations national governments and supranational institutions Pynchon as do Hardt and Negri theorizes resistance as a horizontal network of individuals who work together without sacrificing their singularities to resist the political and economic exploitation of empire Carswell enriches this examination of Pynchon's politics as made evident in Vineland 1990 Mason Dixon 1997 Against the Day 2006 Inherent Vice 2009 and Bleeding Edge 2013 by reading the novels alongside the global resistance movements of the early 2010s Beginning with the Arab Spring and progressing into the Occupy Movement political activists engaged in a global uprising The ensuing struggle mirrored Pynchon's concepts of power and resistance and Occupy activists in particular constructed their movement around the same philosophical tradition from which Pynchon as well as Hardt and Negri emerges This exploration of Pynchon shines a new light on Pynchon studies recasting his post 1970s fiction as central to his vision of resisting global neoliberal capitalism

The Invisible Rainbow Arthur Firstenberg,2020-03-09 5g is being rolled out across the country despite growing evidence that it is disruptive to our health our safety and the environment The Invisible Rainbow is the groundbreaking story of electricity as it s never been told before exposing its very real impact on the biosphere and human health 100 000 copies sold Over the last 220 years society has evolved a universal belief that electricity is safe for

humanity and the planet Scientist and journalist Arthur Firstenberg disrupts this conviction by telling the story of electricity in a way it has never been told before from an environmental point of view by detailing the effects that this fundamental societal building block has had on our health and our planet In *The Invisible Rainbow* Firstenberg traces the history of electricity from the early eighteenth century to the present making a compelling case that many environmental problems as well as the major diseases of industrialized civilization heart disease diabetes and cancer are related to electrical pollution Few individuals today are able to grasp the entirety of a scientific subject and present it in a highly engaging manner Firstenberg has done just that with one of the most pressing but neglected problems of our technological age BRADLEY JOHNSON MD Amen Clinic San Francisco A masterpiece Celia Farber investigative journalist This seminal book will transform your understanding of the environmental and health effects of electricity and radio frequencies *Paradigm Explorer*

The Grand Contraption David Park, 2021-07-13 *The Grand Contraption* tells the story of humanity's attempts through 4 000 years of written history to make sense of the world in its cosmic totality to understand its physical nature and to know its real and imagined inhabitants No other book has provided as coherent compelling and learned a narrative on this subject of subjects David Park takes us on an incredible journey that illuminates the multitude of elaborate contraptions by which humans in the Western world have imagined the earth they inhabit and what lies beyond Intertwining history religion philosophy literature and the physical sciences this eminently readable book is ultimately about the grand contraption we've constructed through the ages in an effort to understand and identify with the universe According to Park people long ago conceived of our world as a great rock slab inhabited by gods devils and people and crowned by stars Thinkers imagined ether to fill the empty space and in the comforting certainty of celestial movement they discerned numbers and in numbers order Separate sections of the book tell the fascinating stories of measuring and mapping the Earth and Heavens and later the scientific exploration of the universe The journey reveals many common threads stretching from ancient Mesopotamians and Greeks to peoples of today For example humans have tended to imagine Earth and Sky as living creatures Not true say science savvy moderns But truth isn't always the point The point says Park is that Earth is indeed the fragile bubble we surmise and we must treat it with the reverence it deserves **Telescope Teachings** Mary Ward, 1859
