Ecophysiology of Tropical Plants Sachchidanand Tripathi, Rahul Bhadouria, Pratap Srivastava, Rishikesh Singh, Rajkumari Sanayaima Devi, 2023-10-03 Plants in tropical regions are coping with enormous challenges of physiological stresses owing to changing environmental and climatic conditions Rapid growth of

human population and rampant exploitation of fossil fuels and other developmental activities are actively contributing to such perturbations. The Intergovernmental Panel on Climate Change has projected a sustained increase in carbon dioxide CO₂ emissions and thereby a rise in global temperature in the coming decades. The resultant changes in precipitation patterns are now evident across the globe due to intensification of hydrological cycle. Moreover, gaseous and particulate pollutants are also an immense challenge for tropical plants. Such vagaries in environmental conditions have significant impacts on the ecophysiological traits of plants resulting from altered interactions of tropical plants with each other as well as other biotic and abiotic components within the ecosystem. Books available in the market that particularly focus on ecophysiological responses of tropical plants to abiotic and biotic environmental factors under climate change are limited. This book intends to fill this knowledge gap and provides a detailed analysis on ecophysiological responses of tropical plants to these environmental challenges as well as suggesting some approachable measures for plant adaptations to these challenges. The book is equally applicable to undergraduate and postgraduate students, researchers, teachers, and forest managers and policy makers. Salient features of the book are: A comprehensive discussion on adaptive mechanisms of plants through their ecophysiological responses to various biotic and abiotic stresses; Elaboration on the recent techniques involved in ecophysiological research; A detailed account of evolutionary responses of plants to changing climate; Discussion of recent research results and some pointers to future advancements in ecophysiological research; Presentation of information in a way that is accessible for students, researchers, and teachers practicing in plant physiology and ecology.

Change in the Amazon Basin: Man's impact on forests and rivers John Hemming, 1985 *Four Neotropical Rainforests* Alwyn H. Gentry, 1993-01-27

The sites Floristics Birds Mammals Reptiles and amphibians Forest dynamics *Amazonian Indigenous Cultures in Art and Anthropological Exhibitions* Cinthya Lana, 2022-07-05

The book discusses the representation of Amazonian indigenous cultures in art and anthropological exhibitions through the analysis of a series of case studies of temporary exhibitions taking place in museums and biennials in Brazil, Europe, and the United States spanning a period of 25 years from the mid 1980s. The book puts forward the concept of minor curating as a strategy to amplify access to collections of historical relevance for indigenous peoples and to enable them to develop projects that are politically, historically, and culturally meaningful for their own societies through curatorial authorship.

ICYMARE - Early Career Researchers in Marine Science Simon Jungblut, Carolin Müller, Lena Rölfer, Yvonne Schadewell, 2025-06-05

The International Conference for Young Marine Researchers ICYMARE is a recently founded bottom up driven networking initiative. ICYMARE conducts an annual on site conference event as well as a monthly Online Forum to foster international exchange and networking among marine early career researchers. In both cases, on site conference and Online Forum, the early careers organize and conduct the whole event but also identify the conference topics and prepare and moderate their topical sessions. This Research Topic aims to feature articles authored by early career researchers who

were involved as a conference or Online Forum session hosts in the ICYMARE initiative As emerging experts in their respective fields of marine science they are invited to contribute review articles on specific topics within the topical frame of their ICYMARE conference session Thus articles on this Research Topic may come from all fields of marine sciences as it reflects the scope of the ICYMARE conferences **Naval Meteorology and Oceanography Command News** ,1997

Tropical Fire Ecology Mark Cochrane,2010-04-11 The tropics are home to most of the world s biodiversity and are currently the frontier for human settlement Tropical ecosystems are being converted to agricultural and other land uses at unprecedented rates Land conversion and maintenance almost always rely on fire and because of this fire is now more prevalent in the tropics than anywhere else on Earth Despite pervasive fire human settlement and threatened biodiversity there is little comprehensive information available on fire and its effects in tropical ecosystems Tropical deforestation especially in rainforests has been widely documented for many years Forests are cut down and allowed to dry before being burned to remove biomass and release nutrients to grow crops However fires do not always stop at the borders of cleared forests Tremendously damaging fires are increasingly spreading into forests that were never evolutionarily prepared for wild fires The largest fires on the planet in recent decades have occurred in tropical forests and burned millions of hectares in several countries The numerous ecosystems of the tropics have differing levels of fire resistance resilience or dependence At present there is little appreciation of the seriousness of the wild fire situation in tropical rainforests but there is even less understanding of the role that fire plays in the ecology of many fire adapted tropical ecosystems such as savannas grasslands and other forest types
