Political Ideas in the Romantic Age Isaiah Berlin, 2014-05-25 This new edition features the previously unpublished delivery text of Berlin s inaugural lecture as a professor at Oxford which derives from this volume and stands as the briefest and most pithy version of his famous essay Two Concepts of Liberty Political Ideas in the Romantic Age is the only book in which the great intellectual historian Isaiah Berlin lays out in one continuous account most of his key insights about the period he made his own Written for a series of lectures at Bryn Mawr College in 1952 and heavily revised and expanded by Berlin afterward the book argues that the political ideas of 1760 1830 are still largely ours down to the language and metaphors they are expressed in Berlin provides a vivid account of some of the era s most influential thinkers including Rousseau Fichte Hegel Helvetius Condorcet Saint Simon and Schelling Written in Berlin s characteristically accessible style this is his longest single text Distilling his formative early work and containing much that is not to be found in his famous essays the book is of great interest both for what it reveals about the continuing influence of Romantic political thinking and for what it shows about the development of Berlin s own influential thought The book has been carefully prepared by Berlin s longtime editor Henry Hardy and Joshua L Cherniss provides an illuminating introduction that sets it in the context of Berlin s life and work

Educational Times and Journal of the College of Preceptors, 1908 Synthetic Philosophy of Contemporary Mathematics Fernando Zalamea, 2012-09-01 A panoramic survey of the vast spectrum of modern and contemporary mathematics and the new philosophical possibilities they suggest A panoramic survey of the vast spectrum of modern and contemporary mathematics and the new philosophical possibilities they suggest this book gives the inquisitive non specialist an insight into the conceptual transformations and intellectual orientations of modern and contemporary mathematics The predominant analytic approach with its focus on the formal the elementary and the foundational has effectively divorced philosophy from the real practice of mathematics and the profound conceptual shifts in the discipline over the last century The first part discusses the specificity of modern 1830 1950 and contemporary 1950 to the present mathematics and reviews the failure of mainstream philosophy of mathematics to address this specificity Building on the work of the few exceptional thinkers to have engaged with the real mathematics of their era including Lautman Deleuze Badiou de Lorenzo and Ch telet Zalamea challenges philosophy's self imposed ignorance of the making of mathematics In the second part thirteen detailed case studies examine the greatest creators in the field mapping the central advances accomplished in mathematics over the last half century exploring in vivid detail the characteristic creative gestures of modern master Grothendieck and

contemporary creators including Lawvere Shelah Connes and Freyd Drawing on these concrete examples and oriented by a unique philosophical constellation Peirce Lautman Merleau Ponty in the third part Zalamea sets out the program for a sophisticated new epistemology one that will avail itself of the powerful conceptual instruments forged by the mathematical mind but which have until now remained largely neglected by philosophers
