The Truth About Grief Ruth Davis Konigsberg, 2011-01-04 The five stages of grief are so deeply imbedded in our culture that no American can escape them Every time we experience loss a personal or national one we hear them recited denial anger bargaining depression and acceptance The stages are invoked to explain everything from how we will recover from the death of a loved one to a sudden environmental catastrophe or to the trading away of a basketball star But the stunning fact is that there is no validity to the stages that were proposed by psychiatrist Elisabeth Kubler-Ross more than forty years ago In *The Truth About Grief* Ruth Davis Konigsberg shows how the five stages were based on no science but nonetheless became national myth She explains that current research paints a completely different picture of how we actually grieve It turns out people are pretty well programmed to get over loss Grieving should not be a strictly regimented process she argues nor is the best remedy for pain always to examine it or express it at great length The strength of Konigsberg's message is its liberating force there is no manual to grieving you can do it freestyle In the course of clarifying our picture of grief Konigsberg tells its history revealing how social and cultural forces have shaped our approach to loss from the Gettysburg Address through 9/11 She examines how the American version of grief has spread to the rest of the world and contrasts it with the interpretations of other cultures like the Chinese who focus more on their bond with the deceased than on the emotional impact of bereavement Konigsberg also offers a close look at Kubler-Ross herself who she borrowed from to come up with her theory and how she went from being a pioneering psychiatrist to a New Age healer who sought the guidance of two spirits named Salem and Pedro and declared that death did not exist Deeply researched and provocative *The Truth About Grief* draws on history culture and science to upend our country's most entrenched beliefs about its most common experience

Loss, Grief, and Bereavement Otto Schwarz Margolis, Lillian G. Kutscher, 1985 Thanatology is a discipline which focuses on the practice of supportive physical and emotional care for those who are dying as well as their families The essays collected for this volume discuss the entire continuum of bereavement and grief Among the topics discussed are Anticipatory Grief the period following diagnosis of serious illness when the victim and family members must adapt to a new projection for the future and Pathological Bereavement the behavior pattern of those who find emotional recovery so difficult that everyday life becomes impossible The book also includes instructive case studies which examine each phase of bereavement from a variety of

professional perspectives **Loss, Grief, and Trauma in the Workplace** Neil Thompson, Dale Lund, 2017-07-12 The workplace is not immune to the problems pressures and challenges presented by experiences of loss and trauma and the grief reactions they produce This clearly written well crafted book offers important insights and understanding to help us appreciate the difficulties involved and prepare ourselves for dealing with such demanding situations when they arise People s experiences of loss and trauma are of course not left at the factory gate or the office door Nor are loss and traumatic events absent from the workplace itself Loss grief and trauma are very much a part of life and that includes working life Executives managers human resource professionals and employee assistance staff need to have at least a basic understanding of how loss grief and trauma affect people in the workplace This book provides that foundation of understanding and offers guidance on how to find out more about these vitally important workplace issues The text provides a valuable blend of theory and practice that will be of interest to those involved in management human resources and organizational studies as well as those interested in the social scientific study of loss grief and trauma and of course to those involved in the helping professions It is essential reading for anyone concerned with making the workplace a more humane and effective environment or anyone wishing to develop an understanding of the complexities of loss grief and trauma in our lives *The Nature of Grief* John

Archer, 2003-09-02 In this study on the evolution of grief John Archer shows that grief is a natural reaction to losses of many sorts and he proves this by bringing together material from evolutionary psychology ethology and experimental psychology
