Swenson, Jr., 2013-08-28 The Ethereal Aether is a historical narrative of one of the great experiments in modern physical science The fame of the 1887 Michelson Morley aether drift test on the relative motion of the earth and the luminiferous aether derives largely from the role it is popularly supposed to have played in the origins and later in the justification of Albert Einstein's first theory of relativity its importance is its own As a case history of the intermittent performance of an experiment in physical optics from 1880 to 1930 and of the men whose work it was this study describes chronologically the conception experimental design first trials repetitions influence on physical theory and eventual climax of the optical experiment Michelson Morley and their colleague Miller were the prime actors in this half century drama of confrontation between experimental and theoretical physics The issue concerned the relative motion of Spaceship Earth and the Universe as measured against the background of a luminiferous medium supposedly filling all interstellar space At stake it seemed were the phenomena of astronomical aberration the wave theory of light and the Newtonian concepts of absolute space and time James Clerk Maxwell's suggestion for a test of his electromagnetic theory was translated by Michelson into an experimental design in 1881 redesigned and reaffirmed as a null result with Morley in 1887 thereafter modified and partially repeated by Morley and Miller finally completed in 1926 by Miller alone then by Michelson's team again in the late 1920s Meanwhile Helmholtz Kelvin Rayleigh FitzGerald Lodge Larmor Lorentz and Poincaré most of the great names in theoretical physics at the turn of the twentieth century had wrestled with the anomaly presented by Michelson's experiment As the relativity and quantum theories matured wave particle duality was accepted by a new generation of physicists The aether drift tests disproved the old and verified the new theories of light and electromagnetism By 1930 they seemed to explain Einstein relativity and space time But in historical fact the aether died only with its believers *The Life of Arthur Stanley Eddington* A. Douglas,2018-03-11 This is the definitive biography of the great astronomer mathematician and philosopher Sir Arthur Stanley Eddington which was highly praised on its first publication in 1956 It has long been out of print and we now offer it in a fresh edition In the 1920s Alice Vibert Douglas was that unusual creature for the day a lady student of astronomy and she was one of Eddington s pupils at Cambridge She knew the great man personally and was able to paint a uniquely vivid portrait Eddington was a super giant in an age of intellectual giants in physics and astronomy He was one of the first men to understand General Relativity and he evangelized that new theory to the English speaking scientific public he did ground breaking work in astrophysics on the Constitution of the Stars and during his last twelve years he developed but could not complete his great synthesis Fundamental Theory an extraordinary combination of quantum theory and relativity which included derivations of many of the fundamental constants of physics from purely epistemological principles He also devoted a great deal of effort to his philosophy of Selective Subjectivism or Subjective Structuralism PRESS COMMENTS from 1956 The Observatory London written by Eddington s assistant for eighteen years The writing of the biography of such a man as Eddington required great courage and deep understanding of his scientific works for his mind and pen ranged over the whole expanse of astronomy and atomic physics in a measure unequalled by any of his contemporaries Professor Douglas reveals a literary skill befitting the eminence of the subject of her book She has rendered a signal service in the realms of scientific biography her book will bring delight and profit to all classes of readers Dr Slater Leeds This biography brings so much enlightenment on the development of Eddington s scientific and philosophical outlook that all students of his work will thank Dr Douglas Sky and Telescope T K Menon Harvard College Observatory An integrated view of the activities of a truly great scientist an interesting account of his early studies of star motions through stellar structure relativity and cosmology a lively narrative of his controversies with his fellow astronomers a lucid outline of Eddington s personal philosophy No review can be complete without commenting on the literary excellence of this biography fascinating reading for both the professional and the amateur astronomer We quote a poem which Eddington wrote on the subject of his famous eclipse expedition in 1919 when he verified Einstein s prediction of the deflection of starlight Ah Moon of my Delight far on the wane The Moon of Heaven has reached the Node again But clouds are massing in the gloomy sky O'er this same Island where we laboured long in vain And this I know whether EINSTEIN is right Or all his Theories are exploded quite One glimpse of stars amid the Darkness caught Better than hours of toil by Candle light Ah Friend could thou and I with LLOYDS insure For Gold this sorry Coelostat so poor Would we not shatter it to bits and for The next Eclipse a trustier Clock procure The Clock no question makes of Fast or Slow But steadily and with a constant Rate it goes And Lo the clouds are parting and the Sun A crescent glimmering on the screen It shows It shows Five Minutes not a moment left to waste Five Minutes for the picture to be traced The Stars are shining and coronal light Streams from the Orb of Darkness Oh make haste For in and out above about below Tis nothing but a magic Shadow show Played in a box whose Candle is the Sun Round which we phantom figures come and

Free Will & Action Filip Grgić,Davor Pećnjak,2018-11-14 This book consists of eleven new essays that provide new insights into classical and contemporary issues surrounding free will and human agency They investigate topics such as the nature of practical knowledge and its role in intentional action mental content and explanations of action recent arguments for libertarianism the situationist challenge to free will freedom and a theory of narrative configuration the moral responsibility of the psychopath and free will and the indeterminism of quantum mechanics Also tackling some historical precursors of contemporary debates taken together these essays demonstrate the need for an approach that recognizes the multifaceted nature of free will This book provides essential reading for anyone interested in the current scholarship on free will **The Man Who Loved Only Numbers** Paul Hoffman,2024-05-07 A funny marvelously readable portrait of one of the most brilliant and eccentric men in history The Seattle Times Paul Erdos was an amazing and prolific mathematician whose life as a world wandering numerical nomad was legendary He published almost 1500 scholarly papers before his death in 1996 and he probably thought more about math problems than anyone in history Like a traveling salesman offering his thoughts as wares Erdos would show up on the doorstep of one mathematician or another and announce My brain is open After working through a problem he d move on to the next place the next solution Hoffman s book like Sylvia Nasar s biography of John Nash A Beautiful Mind reveals a genius s life that transcended the merely quirky But Erdos s brand of madness was joyful unlike Nash s despairing schizophrenia Erdos never tried to dilute his obsessive passion for numbers with ordinary emotional interactions thus avoiding hurting the people around him as Nash did Oliver Sacks writes of Erdos A mathematical genius of the first order Paul Erdos was totally obsessed with his subject he thought and wrote mathematics for nineteen hours a day until the day he died He traveled constantly living out of a plastic bag and had no interest in food sex companionship art all that is usually indispensable to a human life The Man Who Loved Only Numbers is easy to love despite his strangeness It s hard not to have affection for someone who referred to children as epsilons from the Greek letter used to represent small quantities in mathematics a man whose epitaph for himself read Finally I am becoming stupider no more and whose only really necessary tool to do his work was a quiet and open mind Hoffman who followed and spoke with Erdos over the last 10 years of his life introduces us to an undeniably odd yet pure and joyful man who loved numbers more than he

loved God whom he referred to as SF for Supreme Fascist He was often misunderstood and he certainly annoyed people sometimes but Paul Erdos is no doubt missed Therese Littleton *Covered with Deep Mist* Dean Rickles,2020 This is the first book length treatment of the history of attempts to bring quantum mechanics and gravitation together It goes beyond a mere technical examination of the problems by also looking at social and cultural factors involved in the changing fortunes of the field

S Chandrasekhar: The Man Behind The Legend Kameshwar C Wali,1997-11-21 Subrahmanyam Chandrasekhar known simply as Chandra throughout the scientific world has become a legendary figure for his prolific contributions to physics astrophysics and applied mathematics Before his death in 1995 Chandra had forbidden a memorial of the conventional sort celebrating his life This book which contains some thirty articles by his former students his associates and his colleagues is in a sense a memorial volume It says little about Chandra s great scientific achievements but shows his human side and the various facets of his brilliant personality his incredible memory his wit and the breadth of his knowledge of art music literature and the humanities in general The contributors to this highly interesting book are among the few who broke the seemingly forbidden barrier surrounding the very private Chandra and came to know him well in one context or another They include Lalitha Chandrasekhar Roger Penrose Richard H Dalitz J W Cronin Robert G Sachs Abhay Ashtekar and Robert Wald *Modern England, 1901-1984* Alfred F. Havighurst,2004-07-08 The most comprehensive bibliography of printed books articles and standard texts on twentieth century England

Teaching Einsteinian Physics in Schools Magdalena Kersting,David Blair,2021-08-30 In our world today scientists and technologists speak one language of reality Everyone else whether they be prime ministers lawyers or primary school teachers speak an outdated Newtonian language of reality While Newton saw time and space as rigid and absolute Einstein showed that time is relative it depends on height and velocity and that space can stretch and distort The modern Einsteinian perspective represents a significant paradigm shift compared with the Newtonian paradigm that underpins most of the school education today Research has shown that young learners quickly access and accept Einsteinian concepts and the modern language of reality Students enjoy learning about curved space photons gravitational waves and time dilation often they ask for more A consistent education within the Einsteinian paradigm requires rethinking of science education across the entire school curriculum and this is now attracting attention around the world This book brings together a coherent set of chapters written by leading experts in the field of Einsteinian physics education The book begins by exploring the fundamental concepts of space time light and gravity and how teachers can introduce these topics at an early age A radical change in the curriculum requires new learning instruments and innovative instructional approaches Throughout the book the authors emphasise and discuss evidence based approaches to Einsteinian concepts including

computer based tools geometrical methods models and analogies and simplified mathematical treatments Teaching Einsteinian Physics in Schools is designed as a resource for teacher education students primary and secondary science teachers and for anyone interested in a scientifically accurate description of physical reality at a level appropriate for school education
