## Notes On The Plague Years Aids In Marseilles:

*Notes on the Plague Years* Bernard Paillard, An outgrowth of a four year study by Paillard and his research team this volume describes the societal impact of a full force epidemic on a large diversified Mediterranean seaport city In addition to his straightforward empirical reports presented elsewhere the author has here chosen to present a reflexive qualitative study in narrative form portraying the sociologist as participant observer and providing the reader with a pioneering study on problem formation and moral panic For this first English edition Paillard has added an appendix on methodology

**Images of Terror** Philip Jenkins, The book acts as a guide to the images of terrorism that we see daily in the mass media The author believes that our perceptions of terrorism are formed by the interaction of bureaucratic agencies academics and private experts These images and stereotypes that we are offered do not necessarily reflect objective reality

Qualitative Methods and Health Policy Research Elizabeth Murphy, 2017-07-05 Qualitative researchers have traditionally been cautious about

claiming that their work was scientific The right on schools have exaggerated this caution into an outright rejection of science as a model for their work Science is for them outmoded an archaic form of consciousness surviving for a while yet in a degraded form Tyler 1986 200 Scientists assertions that they are in pursuit of truth simply camouflage their own lust for power There is no essential difference between truth and propaganda The authors acknowledge that the boundary between science and propaganda has often been breached and some distrust of scientific claims may be healthy They also question the claim that science creates disinterested and objective knowledge of an observer independent world without concluding that science is impossible The skeptics reservations about qualitative research are based on the deep rooted assumption among natural scientists and some social scientists that there is a world out there prior to and independent of their observations This world can be known objectively in the sense that all observers will if identically placed see it in exactly the same way If a suitable language were available they would also all produce identical descriptions From these observations they can work out the laws governing the world s operations The authors try to resolve these contrary claims by asserting that science is a procedural commitment It consists of openness to refutation a conscientious and systematic search for contradictory evidence and a readiness to subject one s preconceptions to critical examination The devotion to truth as a regulative ideal is an essential difference between science and propaganda This work is a unique and innovative defense of scientific method

**Using Murder** Philip Jenkins, 2017-09-08 First published in 1994 this book investigates the social construction of serial homicide and assesses the concern that popular fears and stereotypes have exaggerated the actual scale of multiple homicide Jenkins has produced an innovative synthesis of approaches to social problem construction that includes an historical and social scientific estimate of the objective scale of serial murder a rhetorical analysis of the construction of the phenomenon in public debate a cultural studies oriented analysis of the portrayal of serial murder in contemporary media Chapters include The Construction of Problems and Panic which covers areas such as comprehending

murder dangerous outsiders and the rhetoric of persecution The Reality of Serial Murder which discusses statistics stereotype examination and media patterns Popular Culture Images of the Serial Killer The Racial Dimension Serial Murder as Bias Crime and Darker than We Imagine Cults and Conspiracies Nowhere to Grow Les B. Whitbeck, Danny R. Hoyt, Les B. Whitbeck and Dan R. Hoyt begin their report on street children in the Midwest with the statement If you live in or have visited even a medium sized city recently you have seen runaway and homeless young people They congregate in certain downtown areas and hang out in malls during inclement weather Mostly they look like the other kids The difference is that they won't be going home tonight This book draws on a study of over six hundred runaway and homeless adolescents and over two hundred of their caretakers from cities in four Midwestern states It focuses on the family histories of these young people and on the developmental impact of early independence Street social networks subsistence strategies sexuality and street victimization are all considered as well as their effect on adolescent behaviors and emotional health Relying on interviews and data from survey research and working in partnership with street outreach agencies Whitbeck and Hoyt lead the reader through the various risk factors associated with precocious independence beginning in the family and extending to external environments and behaviors Nowhere to Grow is an emotional account of the cumulative consequences for young people with few good options at the outset and even fewer once they are on their own

**The Rise and Fall of Social Psychology** Augustine Brannigan, 2004-01-01 This unflinching effort critically traces the attempt of social psychology over the past half century to forge a scientific understanding of human behavior based on the systematic use of experiments Having examined the record from the inception of the field to the present Brannigan suggests that it has failed to live up to its promise that social psychologists have achieved little consensus about the central problems in the field that they have failed to amass a body of systematic non trivial theoretical insight and that recent concerns over the ethical treatment of human subjects could arguably bring the discipline to closure But that is not the disastrous outcome that Brannigan hopes for Rather going beyond an apparent iconoclasm the author explores prospects for a post experimental discipline It is a view that admits the role of ethical considerations as part of scientific judgment but not as a sacrifice of but an extension of empirical research that takes seriously how the brain represents information and how these mechanisms explain social behaviors and channel human choices and appetites What makes this work special is its function as a primary text in the history as well as the current status of social psychology as a field of behavioral science The keen insight touched by the gently critical styles of such major figures as Philip Zimbardo Morton Hunt Leon Festinger Stanley Milgram Alex Crey Samuel Wineburg Carol Gilligan David M. Buss among others makes this a perfect volume for students entering the field and no less a reminder of the past as well as present of social psychology for its serious practitioners Augustine Brannigan is professor of sociology in the department of sociology at the University of Calgary He is the author of The Social Basis of Scientific Discoveries and of various social science publications *Abortion, Motherhood, and Mental Health* Ellie Lee,

Whatever reproductive choices women make whether they opt to end a pregnancy through abortion or continue to term and give birth they are considered to be at risk of suffering serious mental health problems According to opponents of abortion in the United States potential injury to women is a major reason why people should consider abortion a problem On the other hand becoming a mother can also be considered a big risk This fine well balanced book is about how people represent the results of reproductive choices It examines how and why pregnancy and its various outcomes have come to be discussed this way The author s interest in the medicalization of reproduction its representation as a mental health problem first arose in relation to abortion There is a very clear contrast between the construction of women who have abortions implied by moralized argument against abortion and the construction that results when the case against abortion focuses on its effects on women s mental health Lee argues that claims that connect abortion with mental illness have been limited in their influence but this is not to suggest that they have not become a focus for discussion and have had no impact The limits to such claims about abortion do not by any means suggest limits to the process of the medicalization of pregnancy more broadly that is a process of demedicalization The final theme of Ellie Lee s book is the selective medicalization of reproduction Centering on the claim that abortion can create a post abortion syndrome the author examines the medicalization of the abortion problem on both sides of the Atlantic Lee points to contrasts in legal and medical dimensions of the abortion issue that make for some important differences but argues that in both the United States and Great Britain the post abortion syndrome claim constitutes an example of the limits to medicalization and the return to the theme of motherhood as a psychological ordeal Lee makes the case for looking to the social dimensions of mental health problems to account for and understand debates about what makes women ill Ellie Lee is research fellow in the Department of Sociology and Social Policy University of Southampton Highfield United Kingdom

Social Problems Donileen Loseke, 2017-07-05 This collection of focused essays is directed at several levels of students of social problems It is accessible to the uninitiated who are not familiar with the constructionist literature and aimed at those who are not particularly interested in subtle theoretical and empirical issues of concern to academics studying social problems from constructionist perspectives Some readings focus on the construction of problems by scientists and other professionals others examine the work of social activists mass media and social service personnel Among the topics included are studies of social inequalities and individual deviance a comparison of the images of social problems in the United States with those in other countries and an examination of the importance of politics and power in constructing public images of social problems Constructionist perspectives have become the leading theoretical approach for sociology and allied fields in studying social problems Yet constructionists impact on the teaching of social problems has been far less dramatic Undergraduate courses on social problems are often subject to a theoretical barrage of eclectic perspectives Just as the first social problems textbooks did almost a century ago textbooks continue to present a series of unrelated chapters each devoted to a particular social problem Social Problems is an effort at

systematic analysis rather than random thought on the subject Social Problems presents detailed case studies demonstrating how constructionist perspectives can actually be applied to understand particular social problems While these articles can be read alone the editors have organized these selections to correspond with the chapter topics in the second edition of Donileen Loseke's Thinking about Social Problems an accessible introduction to constructionist approaches At the same time some instructors who use this edited collection might wish to provide the

**How Claims Spread**

Joel Best, Best's anthology examines for the first time how diverse social issues road rage the metric system gun control and abortion are among those included migrate across national boundaries modifying themselves from place to place as a result of different claims claimsmakers and policy responses This unique collection assembled from new research by an international group of social problems scholars will fill a gap in undergraduate and graduate level studies in the constructionist analyses of social problems as well as in political science public policy and criminology Claims concerning one social problem often influence those about another claimsmakers borrow rhetoric and tactics from one another In some cases experienced claimsmakers join efforts to call attention to other social problems compelling images e g the threatened child or random violence link claims about different problems and reactions to one set of claims These case studies describe very different processes ranging from deliberate attempts to disseminate social problem claims to developments that were more inadvertent from successes in which social problem constructions spread to new countries to failures in which claims were sown but failed to take root They are intended to suggest that the diffusion of social problems is neither simple nor automatic Joel Best is professor and chair Department of Sociology and Criminal Justice University of Delaware He has served as an editorial advisor for Aldine that has produced fifty titles

HIV, Aids, and the Law

Donald T. Dickson, Although morbidity among HIV AIDS victims has decreased the rate of new infections has remained steady for several years substantially increasing the likelihood that this epidemic will continue and expand as a concern for social workers and their clientele both of whom will need to be kept informed of the complex laws governing the milieu and the consequences of the disease This is certainly the case with its spread throughout Asia and Africa In this new work the author draws upon statutes and court decisions from across the United States to provide a comprehensive and current picture of the many facets of HIV AIDS law including health policy confidentiality privacy bioethics the workplace and criminal law and corrections The volume of legal medical social science and popular literature pertaining to HIV AIDS that has been published over the past two decades is staggering Hence any addition to this collection needs some justification What Dickson offers is different from what has preceded Rather than one more contribution to the extensive legal or social science literature this book attempts to integrate the perspectives from two fields law and social work The hope is that this will give social workers practitioners and teachers a better understanding of one of the major issues that may face them in their work with patients and clients every day To date although there is extensive HIV and AIDS related literature in social work and the social sciences it is primarily focused on social work

practice issues Where law has been introduced in these works it often is narrow in focus and given the rapid changes in the field no longer up to date This book does not purport to discuss all legal issues in all jurisdictions relating to HIV AIDS but rather to choose selectively those that have particular relevance for social work and social policy The author has placed reliance on those published medical works cited with approval in the legal and social science literature This is a seminal work on the relationship of law medicine and ethics Donald T Dickson is professor in the School of Social Work at Rutgers The State University of New Jersey in New Brunswick
