

NOURAGUES

The background of the cover is a photograph of a lush, dense neotropical rainforest. Sunlight filters through the thick canopy of green leaves, creating a dappled light effect. The foliage is dense and varied in shades of green, with some leaves showing signs of being eaten or damaged.

Nouragues Dynamics And Plantanimal Interactions In A Neotropical Rainforest:

Nouragues F. Bongers, 2001-11-30 Nouragues is a tropical forest research station in French Guiana It was established in 1986 for research on natural mechanisms of forest regeneration Since then a lot of research has been done on this and related topics This book provides an overview of the main research results and focuses on plant communities vertebrate communities and evolutionary ecology frugivory and seed dispersal and forest dynamics and recruitment The appendices give annotated checklists of plants birds mammals herpetofauna and fishes found in the same area *Nouragues* F.

Bongers, P. Charles-Dominique, P.-M. Forget, Marc Théry, 2013-06-29 Nouragues is a tropical forest research station in French Guiana It was established in 1986 for research on natural mechanisms of forest regeneration Since then a lot of research has been done on this and related topics This book provides an overview of the main research results and focuses on plant communities vertebrate communities and evolutionary ecology frugivory and seed dispersal and forest dynamics and recruitment The appendices give annotated checklists of plants birds mammals herpetofauna and fishes found in the same area

Seed Dispersal and Frugivory Douglas John Levey, Wesley R. Silva, Mauro Galetti, 2002 This book provides information on the historical and theoretical perspectives of biodiversity and ecology in tropical forests plant and animal behaviour towards seed dispersal and plant animal interactions within forest communities consequences of seed dispersal and conservation biodiversity and management *Seed Fate* J. E. Lambert, P. E. Hulme, S. B. Vander Wall, 2005 This book presents current knowledge of seed fate in both natural and human disturbed landscapes from various regions of the world Habitats considered range from mountain and arid deserts in the temperate zone to savanna and lowland rainforests in tropical regions of the world Particular attention is paid to plant diversity conservation when seed removal is affected by factors such as hunting habitat fragmentation or intensive logging Contributors include leading scientists involved in research on seed ecology and on animal plant relationships from the perspective of both primary and secondary seed dispersal and predation Tropical Forests of the Guiana Shield D. S. Hammond, 2005 The Guiana Shield is an ancient geological formation located in the northern part of South America covering an area of one million square kilometres Despite its hostile environment it is home to many unusual and highly specialized plants and animals which constitute a rich area of biodiversity Chapters in this book include hydrology nutrient cycling forest phenology insect plant interactions forest microclimate plant distributions forest dynamics and conservation and management of flora and fauna It provides a comprehensive and detailed review of the ecology biology and natural history of the forests of the area **On the Origins and Dynamics of Biodiversity: the Role of Chance** Alain Pavé, 2010-07-03 Chance is necessary for living systems from the cell to organisms populations communities and ecosystems It is at the heart of their evolution and diversity Long considered contingent on other factors chance both produces random events in the environment and is the product of endogenous mechanisms molecular as well as cellular demographic and ecological This is how living things have been able to diversify

themselves and survive on the planet Chance is not something to which Life has been subjected it is quite simply necessary for Life The endogenous mechanisms that bring it about are at once the products and the engines of evolution and they also produce biodiversity These internal mechanisms veritable biological roulettes are analogous to the mechanical devices that bring about physical chance They can be modeled by analogous mathematical equations This open the way of a global modeling of biodiversity dynamics but we need also to gather quantitative data in both the laboratory setting as well as in the field By examining biodiversity at all scales and all levels this book seeks to evaluate the breadth of our knowledge on this topical subject to propose an integrated look at living things to assess the role of chance in its dynamics in the evolutionary processes and also to imagine practical consequences on the management of living systems *Piper: A Model Genus for Studies of Phytochemistry, Ecology, and Evolution* Lee A. Dyer, Aparna Palmer, 2012-12-06 Piper is an economically and ecologically important genus of plant that includes a fascinating array of species for studying natural history natural products chemistry community ecology and evolutionary biology The diversification of this taxon is unique and of great importance in understanding the evolution of plants The diversity and ecological relevance of this genus makes it an obvious candidate for ecological and evolutionary studies but surprisingly most research on Piper spp to date has focused on the more economically important plants P nigrum black pepper P methysticum kava and P betle betel leaf While this book does address the applied techniques of studying Piper its focus is more on Piper in its natural setting Piper A Model Genus for Studies of Phytochemistry Ecology and Evolution synthesizes existing data and provides an outline for future investigations of the chemistry ecology and evolution of this taxon while examining its key themes of Piper as a model genus for ecological and evolutionary studies the important ecological roles of Piper species in lowland wet forests and the evolution of distinctive Piper attributes This volume has a place in the libraries of those studying or working in the fields of ecology evolutionary biology natural products chemistry invasive species biology pharmaceuticals and ethnobotany **Ecology and Conservation of Neotropical Montane Oak Forests** Maarten Kappelle, 2006-05-18 Covers the range of natural and managed oak forests in the highlands of tropical America Providing an understanding of ecological patterns and processes that determine the structure and functioning of these forests this volume aims to serve as a basis for sustainable forest management and biodiversity conservation *Antpittas and Gnateaters* Harold Greeney, 2018-07-12 This authoritative handbook part of the Helm Identification Guide series looks in detail at the beautiful antpittas Elusive study organisms for ornithologists and highly prized additions to the birder s life list the antpittas Grallariidae and gnateaters Conopophagidae are among the most poorly known Neotropical bird groups This authoritative handbook is the first book dedicated solely to these two families combining an exhaustive review of more than two centuries of literature with original observations by the author and many knowledgeable contributors Antpittas and Gnateaters provides a thorough guide to the identification and ecology of these birds with detailed maps accompanying the text A series of superb plates illustrate most of the 156 recognized taxa

supplemented by more than 250 colour photographs the immature plumages and natural history of many species are depicted for the first time This book is the ultimate reference on these remarkable and beautiful birds and an indispensable addition to the libraries of researchers and birders for many years to come *Seed Dispersal* Andrew J. Dennis, 2007 The chapters of this book on seed dispersal are divided into four parts 1 frugivores and frugivory 8 chapters 2 seed and seedling shadows 7 chapters 3 seed fate and establishment eight chapters and 4 management implications and conservation six chapters The book presents both recent advances and reviews of current knowledge
