

are as susceptible to such suggestion as the boys and girls who crowd into our libraries.

It is easy to understand why there is a predominance of stories in this list which are written with the definite purpose of developing the theme of youth problems and how they are met by the particular heroes and heroines in these books. I would like to see some of these acceptable but commonplace books replaced by others which adhere to the same fundamental principles of behavior but which have, at the same time, more spontaneity, more penetrating insight into human character and more outstanding literary qualities. A particular instance may help to illustrate this point. Experience in using McNeely's "Jumping-off Place" and Ransome's "We didn't mean to go to sea" with children has shown that they read both books with equal enthusiasm and enjoyment. These two stories have several things that are similar about their themes. Both tell a story of children under conditions which require endurance and courage: both meet their difficulties with fortitude and ingenuity. But the living qualities in the characterization, style and conception of the Ransome book will bring a child into closer contact with the basic problems of life than the somewhat self-conscious idealism of "The Jumping-off Place." If children, whose judgments and tastes are still unformed, read these two books with equal pleasure, I would like to see that they have an opportunity of becoming familiar with more books which are of the calibre of "We didn't mean to go to sea." It is not the social background of children that provides a barrier to literary appreciation but a lack of familiarity and encouragement to read the best things while their minds are still flexible and able to be influenced. The national emphasis in the book selection would limit the usefulness of the list outside of the United States but it is easy to see why the committee felt this was a wise choice of subject, and it has a definite value to the children for whom this list was designed.

On the practical side I would recommend separating informational material on people and places from information on things to do. These are not interests which go hand in hand and in a list of this kind the choice of books on hobbies, and simple practical science is most important.

The experiment is an interesting one from the point of view of the psychologist as well as the librarian. I like especially the broad outlook of the committee and their evident freedom from prejudice. The usefulness of the list would seem to be assured by the flexible attitude of the committee toward the experiment in general and toward the list in particular, and it is this attitude which will bring about the best and most permanent results.
