Sarah Churchwell, Thomas Ruys Smith

Now It Can Be Told The Bestsellers Of 19:

The Casualty Issue in American Military Practice Evan A. Huelfer, 2003-10-30 Huelfer examines the casualty issue in American military thought and practice during the years between the World Wars. He argues that Americans exhibited a distinct aversion to combat casualties during the Interwar Period, a phenomenon that visibly influenced the military establishment and helped shape strategic planning, force modernization, and rearmament for World War II. In a broad topical approach, Huelfer's main theme, casualty aversion, is woven into discussions about military strategy and policies, doctrinal and technological development, the military education system, and how the American officer corps emerged from World War I and prepared for World War II. As Huelfer makes clear, aversion to combat casualties is not just a post-Vietnam War phenomenon but rather has long been embedded within the American national heritage. Conventional wisdom links today's exacerbated aversion to combat casualties as fallout from the Vietnam debacle. In fact, this Vietnam Syndrome has remained at the forefront of contemporary strategic thinking. Huelfer shows that American political and military leaders have held lasting concerns about risking soldiers' lives in combat even pre-dating U.S. involvement in World War II. The grim experiences of World War I had a profound impact upon the U.S. officer corps and how it viewed potential future conflicts. The casualty issue permeated the officers' strategic culture during the Interwar Period and colored their thinking about improving training, doctrinal evolution, force modernization, and technological development. Even though one cannot find the terms "casualty issue," "casualty aversion," or "sensitivity to casualties" directly stated in the speeches and writings of the era, this awareness clearly emerged as a subtext for the entire American effort in preparation for World War II. Huelfer highlights how casualty aversion shaped American strategy for World War II by incorporating ideas about the use of overwhelming force, air power, and mechanization, all designed to minimize losses.

Redlining Culture Richard Jean So, 2020-12-15 The canon of postwar American fiction has changed over the past few decades to include far more writers of color. It would appear that we are making progress, recovering marginalized voices and including those who were for far too long ignored. However, is this celebratory narrative borne out in the data? Richard Jean So draws on big data, literary history, and close readings to offer an unprecedented analysis of racial inequality in American publishing that reveals the persistence of an extreme bias toward white authors. In fact, a defining feature of the publishing industry is its vast whiteness, which has denied nonwhite authors, especially Black writers, the coveted resources of publishing: reviews, prizes, and sales, with profound effects on the language, form, and content of the postwar novel. Rather than seeing the postwar period as the era of multiculturalism, So argues that we should understand it as the invention of a new form of racial inequality, one that continues to shape the arts and literature today. Interweaving data analysis of large-scale patterns with a consideration of Toni Morrison's career as an editor at Random House and readings of individual works by Octavia Butler, Henry Dumas, Amy Tan, and others, So develops a form of criticism that brings together qualitative and quantitative approaches to the study of literature. A vital and provocative work.
