Closed Nuclear Fuel Cycle with Fast Reactors Evgeny Adamov, 2022-07-18 Closed Nuclear Fuel Cycle with Fast Reactors Handbook of Russian Nuclear Power provides unique insights into research and practical activities from leading Russian experts. It presents readers with unprecedented insight and essential knowledge surrounding nuclear fast reactor technologies as well as novel methods to close the nuclear fuel cycle to achieve cleaner, more environmentally friendly and more efficient nuclear power. Using the Proryv Project as a framework, the book's contributors provide detailed descriptions of technologies in development in Russia, allowing readers from around the globe to gain a thorough understanding which they can then apply to their own research and practice. Nuclear engineers and technologists of fast reactors, advanced reactors, and fuel cycles will use this book as a guide to inform new technology development. They will be able to use the experiences from the Proryv Project to drive fast reactor development with closed fuel cycles for the future. Provides a presentation of new nuclear reactor and fuel cycle technologies within the unique framework of Russia's Proryv Project. Presents novel technologies to close the nuclear fuel cycle to promote cleaner and more environmentally protective nuclear power. Includes thorough coverage on the topic, including core design, coolants, fuels, accident protection, and waste management technologies.

Internationalization of the Nuclear Fuel Cycle Russian Academy of Sciences, Russian Committee on the Internationalization of the Civilian Nuclear Fuel Cycle, National Research Council, National Academy of Sciences, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Policy and Global Affairs, Committee on International Security and Arms Control, U.S. Committee on the Internationalization of the Civilian Nuclear Fuel Cycle, 2009-02-26. The so-called nuclear renaissance has increased worldwide interest in nuclear power. This potential growth also has increased in some quarters concern that nonproliferation considerations are not being given sufficient attention. In particular, since introduction of many new power reactors will lead to requiring increased uranium enrichment services to provide the reactor fuel, the proliferation risk of adding enrichment facilities in countries that do not have them now led to proposals to provide the needed fuel without requiring indigenous enrichment facilities. Similar concerns exist for reprocessing facilities. Internationalization of the Nuclear Fuel Cycle summarizes key issues and analyses of the topic, offers some criteria for evaluating options, and makes findings and recommendations to help the United States, the Russian Federation, and the international community reduce proliferation and other risks as nuclear power is used more widely. This book is intended for all those who are concerned about the need for assuring fuel for new reactors and at the same time limiting the spread of nuclear weapons. This audience includes the United States and Russia, other nations that currently supply nuclear material and technology, many other countries contemplating starting or growing nuclear power programs, and the international organizations that support the safe, secure functioning of the international nuclear fuel cycle.
