Task Force on Energy, 1972 Critical Studies of Innovation Benoît Godin, Dominique Vinck, 2017-05-26 Different theories models and narratives of innovation compete for both legitimacy and authority However despite the variations they all offer a consistent pro innovation bias dismissing resistance as irrational and overlooking the value of non users and collateral impacts This book looks at innovation from a different perspective and asks what has been left out It offers a reflexive view and invites researchers to consider new avenues of research through a critique of current

representations of innovation **Science Communication** Sarah R. Davies, Maja Horst, 2016-10-20 This book describes current practices in science communication from citizen science to Twitter storms and celebrates this diversity through case studies and examples. However, the authors also reflect on how scholars and practitioners can gain better insight into science communication through new analytical methods and perspectives. From science PR to the role of embodiment and materiality, some aspects of science communication have been under-studied. How can we better notice these? Science Communication provides a new synthesis for Science Communication Studies. It uses the historical literature of the field, new empirical data, and interdisciplinary thought to argue that the frames which are typically used to think about science communication often omit important features of how it is imagined and practised. It is essential reading for students, scholars, and practitioners of science education, science and technology studies, museum studies, and media and communication studies. *Hearings and Reports on Atomic Energy* United States.
