Nuclear Energy Promise Or Peril:

Nuclear Energy B. van der Zwaan, 1999 Nuclear energy will inevitably become an important issue worldwide in the 21st century It pollutes the environment with consequences that are highly controversial and it generates plutonium the essential component of nuclear weapons At the same time it is a realistic alternative to at least some of the expected huge increase in global demand for fossil fuel burning which itself is a major source of environmental pollution and not least of greenhouse gases This invaluable book attempts to provide for the non technical reader an objective and critical account of the main issues involved The authors are authorities in their own fields and their contributions have been read in manuscript discussed and criticised by a wider international group of experts Thus whilst much of its contents may arouse controversy the book should be an excellent starting point for informed public discussion of a vitally important topic **Nuclear Power**

Michael J. Daley, 1996-12-01 Explores opposing viewpoints on expanding the uses of nuclear power with emphasis on pollution safety and waste disposal **Science's New Direction: Innovation, Patronage, and the Quantum Leap**

H.D. Gesser,2013-11-27 This book is the result of teaching a one semester course in Applied Chemistry Chemistry 224 to second year engineering students for over 15 years The contents of the course evolved as the interests and needs of both the students and Engineering Faculty changed All the students had at least one semester of Introductory Chemistry and it has been assumed in this text that the students have been exposed to Thermodynamics Chemical Kinetics Solution Equilibrium and Organic Chemistry These topics must be discussed either before starting the Applied subjects or developed as required if the students are not familiar with these prerequisites Engineering students often ask Why is another Chemistry course required for Non Chemical Engineers There are many answers to this question but foremost is that the Professional Engineer must know when to consult a Chemist and be able to communicate with him When this is not done the consequences can be a disaster due to faulty design poor choice of materials or inadequate safety factors Examples of blunders abound and only a few will be described in an attempt to convince the student to take the subject matter seriously Unleashing Energy:
