Nuclear Energy: Promise Or Peril? C R Hill,A L Mechelynek,Georges Ripka,B C C Van Der Zwaan,1999-08-16 Nuclear energy will inevitably become an important issue worldwide in the 21st century It pollutes the environment with consequences that are highly controversial and it generates plutonium the essential component of nuclear weapons At the same time it is a realistic alternative to at least some of the expected huge increase in global demand for fossil fuel burning which itself is a major source of environmental pollution and not least of greenhouse gases This invaluable book attempts to provide for the non technical reader an objective and critical account of the main issues involved The authors are authorities in their own fields and their contributions have been read in manuscript discussed and criticised by a wider international group of experts Thus whilst much of its contents may arouse controversy the book should be an excellent starting point for informed public discussion of a vitally important topic

The Challenges to Nuclear Power in the Twenty-First Century Behram N. Kursunogamalu,Stephan L. Mintz,Arnold Perlmutter,2005-12-16 International Energy Forum 1999 was held in Washington D C during November 5 6 1999 in the Hyatt Regency Hotel in Crystal City Once again the main topic was Nuclear Energy Various papers presented contained pros and cons of Nuclear Energy for generating electricity We were aiming to clarify the often discussed subject matter of the virtues of Nuclear Energy with regard to Global Warming as compared to using fossil fuels for the generation of electricity The latter is also currently the only way to operate our means of transportation like automobiles planes etc Therefore emission into the atmosphere of greenhouse gases constitutes the main source of Global Warming which is absent in the case of Nuclear Energy These arguments are often put forward to promote the use of Nuclear Energy However not all is well with the Nuclear Energy There are the questions of the waste problem so far unsolved safety of Nuclear Reactors is not guaranteed to the extent that they are inherently safe If we aim to construct inherently safe reactors then the economics of a Nuclear Reactor makes it unacceptable
