High Energy Astrophysics:

Models And Observations From Mev To Tev Peter L Biermann, David Fegan, Fuxi Gan, Dieter H Hartmann, Richard E Lingenfelter, Pierre Sokolsky, Todor S Stanev, 1994-06-21 This book is a collection of comprehensive reviews on astrophysics at the highest energies It puts together for the first time discussions of astrophysics from MeV to EeV energies and beyond Observations at these energies reveal nuclear and particle physics throughout our galaxy as well as in the most extreme environments in the entire cosmos These reports range from the recent spectacular results from the Compton Gamma Ray Observatory including the latest information on enigmatic gamma ray bursts to cosmic rays at the highest energies ever observed by man

Handbook of X-ray and Gamma-ray Astrophysics Cosimo Bambi, Andrea Santangelo, 2024-02-29 This book highlights a comprehensive coverage of X ray and Gamma ray astrophysics The first and the second parts discuss respectively X ray and Gamma ray experimental techniques and observatories The third part is devoted to science including galactic and extragalactic sources The fourth and last parts are dedicated to analysis techniques in X ray and Gamma ray astronomy spectral analysis imaging analysis timing analysis and polarimetric analysis Presenting the state of the art in X ray and gamma ray astronomy this is both a valuable book for students and an important reference resource for researchers in the field

High Energy Astrophysics James Matthews, 1994 This book is a collection of comprehensive reviews on astrophysics at the highest energies It puts together for the first time discussions of astrophysics from MeV to EeV energies and beyond Observations at these energies reveal nuclear and particle physics throughout our galaxy as well as in the most extreme environments in the entire cosmos These reports range from the recent spectacular results from the Compton Gamma Ray Observatory including the latest information on enigmatic gamma ray bursts to cosmic rays at the highest energies ever observed by man

Currents in Astrophysics and Cosmology G. G. Fazio, R. Silberberg, 1993-10-28 *Currents in Astrophysics and Cosmology* focuses primarily on cosmic ray physics X ray gamma ray and neutrino astronomy and cosmology the main research areas of Professor Maurice M Shapiro whose 75th birthday the collection of articles celebrates Professor Shapiro is internationally distinguished for his contributions to the development of cosmic ray physics Each chapter is written by a leading scientist in the field The scope extends from the inner solar system to distant radio galaxies The book is ideal for graduate students and scientists working in cosmic ray astrophysics This valuable survey will be welcomed not only for its articles by world renowned scientists but also for its coverage of many topics in high energy astrophysics the combination of which makes the book unique

High-Energy Spectroscopic Astrophysics Steven M. Kahn, Peter Ballmoos, Rashid A. Sunyaev, 2005-09-05 After three decades of intense research in X ray and gamma ray astronomy the time was ripe to summarize basic knowledge on X ray and gamma ray spectroscopy for interested students and researchers ready to become involved in new high energy missions This volume exposes both the scientific basics and

modern methods of high energy spectroscopic astrophysics The emphasis is on physical principles and observing methods rather than a discussion of particular classes of high energy objects but many examples and new results are included in the three chapters as well

Supernovae Stanford E. Woosley, 2012-12-06 Supernova explosions are not only important to the ecology of the universe seeding it among other things with the heavy elements necessary for the existence of life but they are also a natural laboratory in which a host of unique physical phenomena occur While still far from a complete understanding scientists have made great advances during the last twenty five years in understanding the nature and consequences of supernovae This book presents the state of supernova studies at the beginning of the 1990 s as reported at a two week meeting on the Santa Cruz campus of the University of California in July 1989 involving 177 astronomers and astrophysicists from 17 nations The 110 papers contained in this volume report all aspects of the field observations at all wavelengths from radio through gamma rays bolometric light curves and spectra neutrino observations the theory of stellar explosions multidimensional models for mixing nucleosynthesis calculations synthetic spectral modeling presupernova evolution supernova remnants supernova rates supernovae as standard candles the interaction of supernovae with their surroundings and constitute the most comprehensive and up to date treatment of SN 1987A currently available Astronomers and astronomy graduate students will find this an invaluable summary of the current state of supernova research The informed layperson or undergraduate astronomy student will also find it a useful introduction and guide to the literature in the subject

Current Topics In Astrophysical Physics - Proceedings Of The 2nd Course In The International School Of Astrophysics "D Chalonge" Normalized Sanchez, Antonino Zichichi, 1993-08-27 A biography of the author's background which provides insight into his training in medicine and his opinions on the concepts and training that are necessary to be a good doctor The aims of this book are to first show how coronary angioplasty was pioneered in Australia Singapore and China Second it is to illustrate the founding of a long awaited medical school in Xiamen China where the author's ancestors originate Third it is to describe the reformation of healthcare cardiology medical research and Art academy in Singapore Fourth it is to demonstrate the vision and realization of the third Asia Pacific cardiovascular intervention block Last but not least this book describes the merging of East West culture medicine art and a personal Christian testimony This book hopes to show that with hard work determination and vision any young man or woman should be able to write a similar life story of their own It is particularly important for young doctors to learn how not to bring grief but goodness to their patients and relatives This book also illustrates the history of the development of coronary intervention in China and the rise of the Asia Pacific region in this field Finally this book provides a unique personal perspective in the convergence of Eastern and Western culture medicine and art
