Nuclear Spectroscopy Fay Ajzenberg-Selove, 2013-10-22 Nuclear Spectroscopy Part A deals with the experimental and theoretical techniques involved in nuclear spectroscopy This book discusses the interactions of charged particles with matter gaseous ionization detectors and particular mass attenuation coefficients The magnetic gamma ray spectrometers for photo or internal conversion electrons general characteristics of cross section variation with energy and measurement of fast neutron spectra are also elaborated This text likewise covers the elastic scattering of photons by nuclei and measurement of widths of gamma radiating levels This publication is recommended for graduate students preparing for experimental research in nuclear spectroscopy students who have completed graduate level courses in quantum mechanics and nuclear physics and specialists who wish to acquire a broader understanding of nuclear spectroscopy Nuclear Science Abstracts, 1975

Nuclear Shell Theory Amos de-Shalit, Igal Talmi, 2013-10-22 Nuclear Shell Theory is a comprehensive textbook dealing with modern methods of the nuclear shell model This book deals with the mathematical theory of a system of Fermions in a central field It is divided into three parts Part I discusses the single particle shell model The second part focuses on the tensor algebra two particle systems The last part covers three or more particle systems Chapters on wave functions in a central field tensor fields and the m Scheme are also presented Physicists graduate students and teachers of nuclear physics will find the book invaluable Nuclear Spectroscopy and Reactions 40-D Joseph Cerny, 2012-12-02 Nuclear Spectroscopy and Reactions Part D covers information regarding the development of nuclear spectroscopy and its reactions while emphasizing in beam spectroscopy This part covers the general theoretical concepts of nuclear investigations This book provides in depth analysis of several concepts of nuclear spectroscopy such as models of heavy and light nuclei approaches in resonance reactions inelastic scattering charge exchange and one and two nucleon transfer reactions This series is written to primarily benefit graduate students who are engaged in research that concerns nuclear spectroscopy

Nuclear Spectroscopy and Reactions 40-A Joseph Cerny, 2012-12-02 Nuclear Spectroscopy and Reactions Part A covers information regarding the development of nuclear spectroscopy and its reactions while emphasizing in beam spectroscopy This part specifically covers concerns regarding accelerators specialized auxiliary equipment and measurement techniques for charged particles and gamma rays Organized into three major sections this book first discusses accelerators in low and intermediate energy nuclear physics and then covers electrostatic accelerators cyclotron and specialized accelerators The second section covers polarized beam and targets as well as on line mass separations The last section discusses the measurement of charged particle and gamma ray spectra including the detection of semiconductor radiation large NaI and charged particles This book is written to primarily benefit graduate students who are engaged in research that concerns nuclear spectroscopy Quantum Theory D. R. Bates, 2013-10-22 Quantum Theory III Radiation and High Energy Physics focuses on the fundamentals and applications of quantum theory The selection first offers information on relativistic wave

equations and noncovariant quantum theory of radiation including the Dirac equation Klein Gordon equation semiclassical theory quantum theory of the radiation field and general electromagnetic fields The text then takes a look at the covariant theory of radiation as well as the relativistic quantum field theory free electromagnetic field electron and electromagnetic fields in interaction and solution of the interacting field problem The publication examines meson theory and nuclear forces and nuclear structure Discussions focus on properties of the noninteracting system characteristics of the two body interaction variational calculation of first order energy relativistic calculations in meson physics and meson nucleon interactions Hidden variables in the quantum theory and nuclear structure are also discussed The selection is a valuable source of data for readers interested in quantum theory

Topics in Atomic Collision Theory Sydney

Geltman,2013-10-22 Topics in Atomic Collision Theory originated in a course of graduate lectures given at the University of Colorado and at University College in London It is recommended for students in physics and related fields who are interested in the application of quantum scattering theory to low energy atomic collision phenomena No attention is given to the electromagnetic nuclear or elementary particle domains The book is organized into three parts static field scattering electron atom collisions and atom atom collisions These are in the order of increasing physical complexity and hence necessarily in the order of decreasing mathematical tractability The topics and methods selected were those which contributed most significantly to the understanding of the physics and the calculation of reliable cross sections The attempt has been made to treat each of the sections in a complete and self contained manner The limited scope of this book has unfortunately made it necessary to omit discussion of many promising methods

Group Theory Eugene P. Wigner,2013-09-03 Group Theory and

its Application to the Quantum Mechanics of Atomic Spectra describes the applications of group theoretical methods to problems of quantum mechanics with particular reference to atomic spectra The manuscript first takes a look at vectors and matrices generalizations and principal axis transformation Topics include principal axis transformation for unitary and Hermitian matrices unitary matrices and the scalar product linear independence of vectors and real orthogonal and symmetric matrices The publication also ponders on the elements of quantum mechanics perturbation theory and transformation theory and the bases for the statistical interpretation of quantum mechanics The book discusses abstract group theory and invariant subgroups including theorems of finite groups factor group and isomorphism and homomorphism The text also reviews the algebra of representation theory rotation groups three dimensional pure rotation group and characteristics of atomic spectra Discussions focus on eigenvalues and quantum numbers spherical harmonics and representations of the unitary group The manuscript is a valuable reference for readers interested in the applications of group theoretical methods

Mathematics in Physics and Engineering J. Irving,N. Mullineux,2013-10-22 Mathematics

in Physics and Engineering describes the analytical and numerical desk machine methods that arise in pure and applied science including wave equations Bessel and Legendre functions and matrices The manuscript first discusses partial

differential equations as well as the method of separation of variables three dimensional wave equation diffusion or heat flow equation and wave equation in plane and cylindrical polar coordinates The text also ponders on Frobenius and other methods of solution Discussions focus on hypergeometric equation Bessel's equation confluent hypergeometric equation and change of dependent and independent variables The publication takes a look at Bessel and Legendre functions and Laplace and other transforms including orthogonal properties applications from electromagnetism spherical harmonics and application to partial differential equations The book also examines matrices analytical methods in classical and wave mechanics calculus of variations and complex variable theory and conformal transformations The book is a dependable reference for mathematicians engineers and physicists both at undergraduate and postgraduate levels

The Quantum Mechanics of Many-Body Systems D. J. Thouless, 2013-10-22 The Quantum Mechanics of Many Body Systems provides an introduction to that field of theoretical physics known as many body theory It is concerned with problems that are common to nuclear physics atomic physics the electron theory of metals and to the theories of liquid helium three and four and it describes the methods which have recently been developed to solve such problems The aim has been to produce a unified account of the field rather than to describe all the parallel methods that have been developed as a result a number of important papers are not mentioned The main emphasis is on the theories of atomic nuclei the electron gas and liquid helium there is no discussion of molecular theory or of solid helium The reader is expected to be familiar with the principles of nonrelativistic quantum mechanics and of statistical mechanics but a knowledge of field theory and a detailed knowledge of nuclear and solid state physics are not assumed
