Nuclei far from stability in nucleon-removal/fragmentation reactions

Fragmentation is an optimum reaction mechanism for exploring the nuclide chart:

- neutron-deficient nuclei are highly populated up to the drip-line
- the in-flight fragmentation of heavy nuclei leading to fission produces medium-mass neutron-rich nuclei
- the large fluctuation in isospin (abrasion) and excitation energy (ablation) give access to **cold fragmentation** processes where neutron-rich nuclei are produced.

Nuclei Far From Stability:

Nuclei Far From Stability and Atomic Masses and Fundamental Constants 1992. R. Neugart, A. Wöhr, 1993-05-01 Nuclei Far from Stability and Atomic Masses and Fundamental Constants 1992 presents a collection of 200 papers presented at two conferences that were held concurrently. Particular attention is paid to developments in the field of nuclear physics with energetic secondary beams and the increase of precision in the determination of atomic masses. Topics covered include nuclear spectroscopy and nuclear shapes, the heaviest elements, fission and cluster radioactivity, beta decay coupling constants, neutrino mass moments and radii, nuclei near the drip line and their structure, atomic masses, nuclear aspects in astrophysics and experimental developments. Nuclei Far from Stability Ian S. Towner, 1988 **The Hispalensis Lectures on Nuclear Physics** Jose Miguel Arias, Manuel Lozano, 2004-11-23 Powerful new techniques including heavy ion and exotic beams are pushing the frontiers of nuclear physics and opening up a wealth of new fields of research. After introductory chapters on theoretical and experimental aspects of nuclear collisions and beams, *Exotic Nuclear Physics* offers articles by experienced lecturers on forefront topics in nuclear physics such as the conquest of the neutron and the proton drip lines, nuclear astrophysics, the equation of state of hypernuclear matter, nuclear supersymmetry and chaotic motion in nuclei. This volume continues the successful tradition of published lecture notes from the Hispalensis International Summer School. It will benefit graduate students and lecturers in search of advanced material for self study and courses as well as researchers in search of a modern and comprehensive source of reference. **The Structure of Nuclei Far from Stability. [Dept. of Physics and Astronomy, Louisiana State Univ., Baton Rouge, Louisiana]**. , 1993 Studies on nuclei near $Z = 82$ contributed to the establishment of a new region of nuclear deformation and a new class of nuclear structure at closed shells. A important aspect of this work is the establishment of the connection between low lying 0^+_{sup} states in even endash even nuclei and the occurrence of shape coexistence in the odd mass neighbors. $E0$ transitions in ^{185}Pt shape coexistence in ^{184}Pt and ^{187}Au . A new type of picosecond lifetime measurement system capable of measuring the lifetime of states that decay only by internal conversion was developed and applied to the ^{186}Tl decay to determine the lifetime of the $0^+_{\text{sub } 2}$ and $2^+_{\text{sub } 2}$ deformed states in ^{186}Hg . A search for the population of superdeformed states in ^{192}Hg by the radioactive decay of ^{192}Tl was accomplished by using a prototype internal pair formation spectrometer. Nuclei Far from Stability and Astrophysics Dorin N. Poenaru, Heinigerd Rebel, Jürgen Wentz, 2012-12-06 A broad range of topics of current interest are discussed from nuclear structure at the edge of stability to nuclear astrophysics and cosmic ray physics at the highest energies. Both the state of the art and basic background information are presented with a particular emphasis on interrelated research interests. The writers are all active scientists who enjoy the highest international reputation. They cover a range of problems of nuclear structure in particular those concerning exotic nuclei and their decay modes, their relevance to nuclear reaction chains in stellar burning processes at various astrophysical sites and as
