

THE NUCLEON OPTICAL MODEL

The background of the cover features abstract, flowing, wavy shapes in shades of pink and magenta against a dark blue background. In the center, there is a white line graph with multiple curves and vertical lines, resembling a scientific plot or a model of particle interactions.

Nucleon Optical Model:

The Nucleon Optical Model Peter Edward Hodgson, 1994 The nucleon optical model is widely used to calculate the elastic scattering cross sections and polarisations for the interaction of neutrons and protons with atomic nuclei The optical model potentials not only describe the scattering but also provide the wave functions needed to analyse a wide range of nuclear reactions They also unify many aspects of nuclear reactions and nuclear structure This book consists of a comprehensive introduction to the subject and a selection of papers by the author describing the optical model in detail It contains full references to the original literature with many examples of the application of the model to the analysis of experimental data *Nucleon Optical Model, the* Peter E Hodgson, 1994-08-26 The nucleon optical model is widely used to calculate the elastic scattering cross sections and polarisations for the interaction of neutrons and protons with atomic nuclei The optical model potentials not only describe the scattering but also provide the wave functions needed to analyse a wide range of nuclear reactions They also unify many aspects of nuclear reactions and nuclear structure This book consists of a comprehensive introduction to the subject and a selection of papers by the author describing the optical model in detail It contains full references to the original literature with many examples of the application of the model to the analysis of experimental data

A Global Nucleon Optical Model Potential, 1991 **A Global Nucleon Optical Model Potential** R. L. Varner, 1991 *Development of Global Medium-energy Nucleon-nucleus Optical Model Potentials*, 1997 The authors report on the development of new global optical model potentials for nucleon nucleus scattering at medium energies Using both Schroedinger and Dirac scattering formalisms the goal is to construct a physically realistic optical potential describing nucleon nucleus elastic scattering observables for a projectile energy range of perhaps 20 meV to perhaps 2 GeV and a target mass range of 16 to 209 excluding regions of strong nuclear deformation They use a phenomenological approach guided by conclusions from recent microscopic studies The experimental database consists largely of proton nucleus elastic differential cross sections analyzing powers spin rotation functions and total reaction cross sections and neutron nucleus total cross sections They will use this database in a nonlinear least squares adjustment of optical model parameters in both relativistic equivalent Schroedinger including relativistic kinematics and Dirac second order reduction formalisms Isospin will be introduced through the standard Lane model and a relativistic generalization of that model
