Objective Coordination In Multiagent System Engineering:

Objective Coordination in Multi-Agent System Engineering Michael Schumacher, 2003-06-29 Based on a suitably defined coordination model distinguishing between objective inter agent coordination and subjective intra agent coordination this book addresses the engineering of multi agent systems and thus contributes to closing the gap between research and applications in agent technology After reviewing the state of the art the author introduces the general coordination model ECM and the corresponding object oriented coordination language STL The practicability of ECM STL is illustrated by the simulation of a particular collective robotics application and the automation of an e commerce trading system Situated at the intersection of behavior based artificial intelligence and concurrent and distributed systems this monograph is of relevance to the agent R D community approaching agent technology from the distributed artificial intelligence point of view as well as for the distributed systems community

Environments for Multi-Agent Systems Danny Weyns, H. Van Dyke Parunak, Fabien Michel, 2005-02-18 The modern eld of multiagent systems has developed from two main lines of earlier research Its practitioners generally regard it as a form of arti cial intelligence AI Some of its earliest work was reported in a series of workshops in the US dating from 1980 revealingly entitled Distributed Arti cial Intelligence and pioneers often quoted

a statement attributed to Nils Nilsson that all AI is distributed The locus of classical AI was what happens in the head of a single agent and much MAS research reflects this heritage with its emphasis on detailed modeling of the mental state and processes of individual agents From this perspective intelligence is ultimately the purview of a single mind though it can be amplified by appropriate interactions with other minds These interactions are typically mediated by structured protocols of various sorts modeled on human conversational behavior But the modern field of MAS was not born of a single parent A few researchers have persistently advocated ideas from the field of artificial life ALife These scientists were impressed by the complex adaptive behaviors of communities of animals often extremely simple animals such as insects or even microorganisms The computational models on which they drew were often created by biologists who used them not to solve practical engineering problems but to test their hypotheses about the mechanisms used by natural systems In the artificial life model intelligence need not reside in a single agent but emerges at the level of the community from the nonlinear interactions among agents cause the individual agents are often subcognitive their interactions cannot be modeled by protocols that presume linguistic competence

Environments for Multi-Agent Systems II Danny Weyns, H. Van Dyke Parunak, Fabien Michel, 2006-03-23 This book constitutes the thoroughly refereed post proceedings of the Second International Workshop on Environments for Multiagent Systems E4MAS 2005 held in Utrecht The Netherlands in July 2005 as an associated event of AAMAS 2005 The 16 revised papers presented were carefully reviewed and selected from the lectures given at the workshop completed by a number of invited papers of prominent researchers active in the domain The papers are organized in topical sections on models architecture and design mediated coordination as well as applications

Engineering Environment-Mediated Multi-Agent Systems Danny Weyns, Sven A. Brueckner, Yves Demazeau, 2008-07-16 Software intensive systems are increasingly expected to deal with changing user needs and dynamic operating conditions at run time Examples are the need for life reconstructions management of resource variability and dealing with particular failure modes Endowing systems with these kinds of capabilities poses severe challenges to software engineers and necessitates the development of new techniques practices and tools that build upon sound engineering principles The field of multi agent systems focuses on the foundations and engineering of systems that consists of a network of autonomous entities agents that interact to achieve the system goals One line of research in multi agent systems inspired by biological physical and other naturally occurring systems concerns multi agent systems in which agents share information and coordinate their behavior through a shared medium called an agent environment Typical examples are gradient fields and digital pheromones that guide agents in their local context and as such facilitate the coordination of a community of agents Since environment mediation in multi agent systems has shown to result in manageable solutions with very adaptable qualities it is a promising paradigm to deal with the increasing complexity and dynamism of distributed applications Control in environment mediated multi agent systems is decentralized i.e. none of the components has full access or control over the system Self organization

is an approach to engineer decentralized distributed and resource limited systems that are capable of dynamically adapting to changing conditions and requirements without external intervention. This useful system property is often reflected in functions such as self configuration, self optimization and self healing. Engineering approaches to self organizing systems often rely on global functionality to emerge from local and autonomous decisions of individual agents that communicate through a shared agent environment.

Multi-Agent Systems and Applications V Hans-Dieter Burkhard, Gabriela Lindemann, Rineke Verbrugge, Laszlo Varga, 2007-09-13. This book constitutes the refereed proceedings of the 5th International Central and Eastern European Conference on Multi Agent Systems CEEMAS 2007 held in Leipzig Germany September 25-27 2007. The 29 revised full papers and 17 revised short papers presented together with an invited paper were carefully reviewed and selected from 84 submissions. The papers cover a wide range of areas.

Multiagent System Technologies Ralph Bergmann, Gabriela Lindemann, Stefan Kirn, Michal Pechoucek, 2008-09-19. For the sixth time the German special interest group on Distributed Artificial Intelligence in cooperation with the Steering Committee of MATES organized the German Conference on Multiagent System Technologies MATES 2008. This conference which took place during September 23-26 2008 in Kaiserslautern followed a series of successful predecessor conferences in Erfurt 2003 2004 and 2006 Koblenz 2005 and Leipzig 2007. MATES 2008 was co-located with the 31st German Conference on Artificial Intelligence KI 2008 and was hosted by the University of Kaiserslautern and the German Research Center for Artificial Intelligence DFKI. As in recent years MATES 2008 provided a distinguished lively and interdisciplinary forum for researchers users and developers of agent technology to present and discuss the latest advances of research and development in the area of autonomous agents and multiagent systems. Accordingly the topics of MATES 2008 covered the whole range from the theory to applications of agent and multiagent technology. In all 35 papers were submitted from authors from 11 countries. The accepted 16 full papers included in this proceedings volume and presented as talks at the conference were chosen based on a thorough and highly selective review process. Each paper was reviewed and discussed by at least three Program Committee members and revised according to their comments. We believe that the papers of this volume are a representative snapshot of current research and contribute to both theoretical and applied aspects of autonomous agents and multiagent systems.

Intelligent Agents and Multi-Agent Systems Bui The Duy, Tuong Vinh Ho, Quang Thuy Ha, 2008-12-11. PRIMA 2008 was the 11th in a series of conferences gathering researchers voted to developing intelligent agents and multi agent technologies from Asia and the Pacific regions. From its first incarnation over a decade ago PRIMA has emerged as a significant international forum facilitating the exchange and dissemination of innovative research from around the globe. PRIMA 2008 was held in Vietnam a tribute to this country's emerging scientific vitality and importance as a developing innovation center. The Program Committee received 56 submissions from 20 countries. Many of these papers are the work of PhD or Masters students from Asian countries including re: Japan Indonesia Malaysia Iran India and Vietnam. In accordance with the rules each submission

was carefully peer reviewed by three Program C mittee referees Only 19 submissions were accepted as regular papers with a competitive rate of 33% Additionally the Program Committee decided to accept 22 short papers mainly written by graduate students allowing our young colleagues an opp tunity to present their work and new perspectives These fresh perspectives enhanced our experienced of the conference and complemented the high quality of the professional papers submitted

Cooperative Information Agents V Matthias Klusch,Franco Zambonelli,2003-06-30 These are the proceedings of the Fifth International Workshop on Cooperative Information Agents held in Modena Italy September 6 8 2001 Information agent technology has become one of the major key technologies for the Internet and the World Wide Web It mainly emerged as a response to the challenges of cyberspace from both the technological and human user perspective Development of information agents requires expertise from di erent research disciplines such as Arti cial Intelligence AI advanced databases and knowledge base systems distributed information systems information retrieval and Human Computer Interaction HCI The fth international workshop on Cooperative Information Agents CIA continued the tradition by capturing the intrinsic interdisciplinary nature of the above research area by calling for contributions from di erent research communities and by promoting open and informative discussions on all related topics In keeping with tradition the workshop featured a sequence of regular and invited talks of excellence given by leading experts in the eld This year the topics of the talks are mainly on the challenges of information agents in the upcoming age of ubiquitous and pervasive computing These challenges are in particular due to the necessity of an e cient utilization evolution and trust management of information agents for user oriented information search pro sion and visualization in networked computing environments with small mobile and embedded devices A di erent issue concerns the potential of agent based support of massive distributed data warehousing worldwide

Methodologies and Software Engineering for Agent Systems Federico Bergenti,Marie-Pierre Gleizes,Franco Zambonelli,2006-04-28 As information technologies become increasingly distributed and accessible to larger number of people and as commercial and government organizations are challenged to scale their applications and services to larger market shares while reducing costs there is demand for software methodologies and appli tions to provide the following features Richer application end to end functionality Reduction of human involvement in the design and deployment of the software Flexibility of software behaviour and Reuse and composition of existing software applications and systems in novel or adaptive ways When designing new distributed software systems the above broad requi ments and their translation into implementations are typically addressed by partial complementarities and overlapping technologies and this situation gives rise to significant software engineering challenges Some of the challenges that may arise are determining the components that the distributed applications should contain organizing the application components and determining the assumptions that one needs to make in order to implement distributed scalable and flexible applications etc
