**Radiocarbon Dating** R.E. Taylor, Ofer Bar-Yosef, 2016-06-03 This volume is a major revision and expansion of Taylor's seminal book *Radiocarbon Dating: An Archaeological Perspective*. It covers the major advances and accomplishments of the  $^{14}\text{C}$  method in archaeology and analyzes factors that affect the accuracy and precision of  $^{14}\text{C}$  based age estimates. In addition to reviewing the basic principles of the method, it examines  $^{14}\text{C}$  dating anomalies and means to resolve them and considers the critical application of  $^{14}\text{C}$  data as a dating isotope with special emphasis on issues in Old and New World archaeology and late Quaternary paleoanthropology. This volume again a benchmark for  $^{14}\text{C}$  dating critically reflects on the method and data that underpins in so many cases the validity of the chronologies used to understand the prehistoric archaeological record. *Radiocarbon Dating ... Second Edition* Willard F. Libby, 1955 [Radiocarbon Dating, by Willard F. Libby, 2nd Edition...](#) Willard F. Libby, 1955 [Nonmetals, Second Edition](#) Monica Halka, Brian Nordstrom, 2019-12-01 Praise for the previous edition a solid addition to a high school and public library science collection Recommended Library Media Connection Materials that are poor conductors of electricity are generally considered nonmetals. One important use of nonmetals is the ability to insulate against current flow. The Earth's atmosphere is composed of nonmetallic elements but lightning can break down the electron bonds and allow huge voltages to make their way to the ground. Water in its pure form is nonmetallic though it almost always contains impurities called electrolytes that allow for an electric field. With an exploration of the benefits and challenges to society, health and the environment *Nonmetals, Second Edition* provides readers with new developments in the research of nonmetals including where they came from, how they fit into our current technological society and where they may lead us. Written in an easy to read format, this newly updated full color resource discusses new developments and dilemmas, past, present and future uses of nonmetals in science and technology and much more. *Nonmetals* explored in this title include hydrogen, carbon, nitrogen, phosphorus, oxygen, sulfur and selenium. **Nuclear Forensic Analysis, Second Edition** Kenton J. Moody, Patrick M. Grant, Ian D. Hutcheon, 2014-12-10 Now in its second edition *Nuclear Forensic Analysis* provides a multidisciplinary reference for forensic scientists, analytical and nuclear chemists and nuclear physicists in one convenient source. The authors focus particularly on the chemical, physical and nuclear aspects associated with the production or interrogation of a radioactive sample. They consolidate fundamental principles of nuclear forensic analysis, all pertinent protocols and procedures, computer modeling, development, interpretational insights and attribution considerations. The principles and techniques detailed are then demonstrated and discussed in their applications to real world investigations and casework conducted over the past several years. Highlights of the Second

Edition include A new section on sample analysis considerations and interpretation following a post detonation nuclear forensic collection New case studies including the most wide ranging and multidisciplinary nuclear forensic investigation conducted by Lawrence Livermore National Laboratory to date Expanded treatments of radiologic dispersal devices RDDs and statistical analysis methodologies The material is presented with minimal mathematical formality using consistent terminology with limited jargon making it a reliable accessible reference The broad based coverage provides important insight into the multifaceted changes facing this recently developed science

A Dictionary of Geography, Second Edition F. J. Monkhouse, 2008 The geographer seeks to describe the diverse features of the earth's surface to explain if possible how these features have come to be what they are and to discuss how they influence the distribution of man with his diverse activities Geography therefore stands transitionally yet centrally between the natural sciences the social studies and the humanities While in its concept and content it is an integrated whole of necessity it impinges on the associated disciplines and inevitably makes use of a wide range of kindred terminology In compiling the 3 400 entries for this dictionary the main criterion for inclusion has been usage Geographical textbooks and periodicals have been systematically combed and where a term has been used in a specific geographical context or in a specialist sense which differs from general practice or popular usage it has been included Foreign words are listed where they have been accepted into English geographical literature especially where no satisfactory translation exists Cross references are freely given printed in small capitals where it is necessary to assist the user in tracing cognate and supplementary entries or where the meaning of the word thus shown is essential to the understanding of the entry The emphasis throughout is on specific factual information conveniently accessible on a strict alphabetical basis rather than a bare definition Statistical material and formulae are appended where it would seem helpful in the form of tables under the relevant entries Since this dictionary is neither a gazetteer nor a compendium of current affairs lists of countries and capitals regional names and international groupings are not included since these can be found conveniently elsewhere The five hundred and seventy two additional entries to this dictionary together with a few minor modifications to the existing material are the result of extensive correspondence and discussion since the appearance of the first edition This edition originally published in 1970 has continuing relevance as a resource for professionals F J Monkhouse was formerly chair of geography at the University of Southampton Throughout his career he was also visiting professor at the University of Illinois University of Maryland Queen's University and the Miami University Ohio His books include *The Countries of North Western Europe and The Lake District* *The UNESCO Training Manual for the Protection of the Underwater Cultural Heritage in Latin America and the Caribbean* Netherlands.
