providing images from the latest available imaging modalities and covers all major diseases that are encountered in everyday clinical practice. A problem orientated approach is used. Every chapter contains a collection of clinical cases each with a short clinical description and initial imaging followed by pertinent questions regarding the imaging findings colour coded in red outline. The second part of each chapter contains the case diagnosis, a discussion of the role of imaging in the presenting problem, a recommended sequence for further imaging evaluation and illustrative examples of the same disease using different imaging modalities for further investigation. Images of conditions in the differential diagnosis are also provided colour coded in blue outline. This textbook is written by experienced radiologists working in undergraduate and postgraduate medical education. It will serve as an ideal text for medical students and radiology trainees.

Pediatric Imaging Cases
 Ellen Chung, 2012-12-20. Featuring 150 cases and over 400 high quality images. Pediatric Imaging Cases offers a complete survey of the field of pediatric radiology. Cases are formatted as questions and answers allowing for self assessment complete with relevant radiologic findings, differential diagnoses, teaching points, further steps in management and suggested further readings. Part of the Cases in Radiology series, this book offers a comprehensive overview of the clinical issues of pediatric radiology: cardiovascular system, gastrointestinal system, genitourinary system, spine, neuroradiology, chest and airway and musculoskeletal system. Ideal for residents preparing for board exams as well as seasoned clinicians wishing to test their knowledge. Pediatric Imaging Cases provides a thorough investigation of the field.

Radiology Chris J. Harvey, Hugh R. S. Roberts, Penny J. Shaw, 1999. Diagnostic radiology plays a vital role in patient management and all clinicians need to be able to recognise the radiological appearances of many medical conditions. Not only are traditional imaging techniques important but newer techniques such as interventional radiology, computed tomography, CT, magnetic resonance imaging, MRI, nuclear medicine and ultrasound are increasingly important in clinical practice and also the interpretation of radiological images is an integral part of professional examinations for MRCP part II. There are five compulsory questions based on printed photographic material with additional radiographs or other diagnostic images being shown occasionally throughout. This book will cover all modalities in radiology providing a guide to the principles of plain radiographic film interpretation and an understanding of the roles and limitations of more complex imaging across general medicine. The material is presented through the discussion of a hundred fully illustrated cases in question and answer format.

Abdominal and Pelvic Imaging Cases Mukesh G. Harisinghani, 2024-11-01

This book offers a practical evidence based casebook on abdominal imaging As imaging is increasingly being used for most clinical scenarios referring physicians rely on radiologists to provide evidence based interpretation for the incidental and indication related findings seen on the imaging studies While imagers are trained in identifying the findings what makes a report more clinically relevant is the accurate assessment and a more focused differential based on knowing the pertinent evidence based data that supports one diagnosis over the other or favors benign over malignant etiology Imagers typically don't have this information readily available to them to provide and make a more informed impression of the findings seen For example if a hyperdense renal lesion with attenuation of 80 HU is seen on the noncontrast stone protocol CT it is important to know what is the likelihood this lesion is worrisome and if any further investigation is needed While this information is available it is scattered and one needs to acquire synthesize and collate this from the web This casebook overcomes this void by providing this information in a simplified case based template that any reader can then quickly reference and use in their day to day work In addition template language for dictation where relevant will be provided Cases are organized around major abdominal areas including bowel genitourinary tract and pancreas Each case also includes a table of pearls and pitfalls to be learned and applied to everyday practice This is an ideal guide for residents fellows and staff from radiology as a day to day resource or board review book Given the lack of a comprehensive text this will be useful to all cadres of radiologists
