Holland, 2014-01-10 An overarching framework for comparing and steering complex adaptive systems is developed through understanding the mechanisms that generate their intricate signal boundary hierarchies Complex adaptive systems cas including ecosystems governments biological cells and markets are characterized by intricate hierarchical arrangements of boundaries and signals In ecosystems for example

niches act as semi permeable boundaries and smells and visual patterns serve as signals governments have departmental hierarchies with memoranda acting as signals and so it is with other cas Despite a wealth of data and descriptions concerning different cas there remain many unanswered questions about steering these systems In Signals and Boundaries John Holland argues that understanding the origin of the intricate signal border hierarchies of these systems is the key to answering such questions He develops an overarching framework for comparing and steering cas through the mechanisms that generate their signal boundary hierarchies Holland lays out a path for developing the framework that emphasizes agents niches theory and mathematical models He discusses among other topics theory construction signal processing agents networks as representations of signal boundary interaction adaptation recombination and reproduction the use of tagged urn models adapted from elementary probability theory to represent boundary hierarchies finitely generated systems as a way to tie the models examined into a single framework the framework itself illustrated by a simple finitely generated version of the development of a multi celled organism and Markov processes

Life in the Cape York Rainforest Robert Heinsohn, 2008 Stunning color photographs Unrivaled and authoritative coverage of an area of great biological interest The remote beautiful and poorly known rainforests of Cape York Peninsula tell a special story about Australia's historic and present day connections to New Guinea This book highlights the connections by examining the fascinating biology of some of the most spectacular birds and other animals shared between the two regions The author recounts his own ground breaking research on cross dressing eclectus parrots musical palm cockatoos and multi colored pythons together with the exotic lifestyles of other animals while painting the bigger picture of the past when Australia and New Guinea were joined by extensive landbridges Australia's disconnection from New Guinea is probably only temporary and even today many bird species continue to fly the short distance between the two landmasses The book uses the beautiful photographs of Michael Cermak and others to draw the reader in and lively informative text to describe the remarkable behavior of many of the rainforest creatures and to emphasize the shallow and transient nature of Torres Strait as a barrier between Cape York and New Guinea Whether just browsing the beautiful photos and informative captions or reading it in its entirety this book will provide a useful guide for a greater understanding of the unique attributes of the Cape York rainforests

Islands of Rainforest Edvard Hviding, Tim Bayliss-Smith, 2018-05-08 This title was first published in 2000 An original and thought provoking analysis of modern initiatives in the tropical rain forest While issues such as logging eco timber eco tourism have been widely analyzed from an outsider's perspective this book considers them from the local people's viewpoint in terms of a long history of the rainforest uses The authors demonstrate that the relationship of indigenous people to the tropical forest is not essentially timeless nor is it primarily spiritual or mystical It is in fact firmly connected to modern realities while still being rooted in historical beliefs and practices Standing at the intersection of anthropology historical geography and rainforest ecology and also at the interface of the local and the global this ethnographically grounded study dispels a number of commonly held assumptions It reveals how processes of impact are actually two way interactions as local communities in Melanesia incorporate industries like logging into rapidly evolving post colonial society and economy

The Rainforests of West Africa MARTIN, 2013-11-11 Nowhere else in the world did industrialized countries leave such early marks in the rainforest as in West Africa Past and present developments here are in one way or the other significant for rainforests on other continents as well West Africa is a pioneer in both a good and a bad sense This is reason enough to take a closer look at the history of moist tropical West Africa Until recently no one really seemed to be interested in the rainforests except for a few specialists The world's scientific community neglected to study the incalculable riches of tropical forests to make the public aware of them and their due importance Although

interdisciplinary research has been a popular topic for some decades now it was not applied to just the most complex habitat on earth Scientists from all fields studied only that which was easiest to record seemingly blind to a myriad of details awaiting closer examination Botanists went about establishing their herbariums and paid much too little attention to the vegetation as a whole or to the significance of useful plants for local populations Zoologists too busied themselves with collecting and describing species Anthropologists on the other hand tended to overlook faunal details in their ignorance of the animal world they wrote of tigers and deer in Africa And finally foresters saw neither the forest nor the trees for the timber and even confused rainforests with monocultures of fir trees
