The Oxford Handbook of Engineering and Technology in the Classical World John Peter Oleson, 2008 Nearly every aspect of daily

life in the Mediterranean world and Europe during the florescence of the Greek and Roman cultures is relevant to engineering and technology This text highlights the accomplishments of the ancient societies the research problems and stimulates further progress in the history of ancient technology *Materiality in Roman Art and Architecture* Annette Haug, Adrian Hielscher, M. Taylor Lauritsen, 2021-12-31 The focus of this volume is on the aesthetics semantics and function of materials in Roman antiquity between the 2nd century B C and the 2nd century A D It includes contributions on both architectural spaces and their material design and objects types of artefacts that differ greatly in the way they were used perceived and loaded with cultural significance With respect to architecture the analysis of material aesthetics leads to a new understanding of the performance imitation and transformation of surfaces including the social meaning of such strategies In the case of objects surface treatments are equally important However object form a specific design category which can enter into tension with materiality comes into particular focus Only when materials are shaped do their various qualities emerge and these qualities are to a greater or lesser extent transferred to objects With a focus primarily on Roman Italy the papers in this volume underscore the importance of material design and highlight the awareness of this matter in the ancient world

Roman Architecture Janet DeLaine, 2024-05-09 Roman Architecture casts new light not only on many familiar monuments of the city of Rome but also on less well known examples from across the Roman empire Rome and its empire were fundamental to the development of western architecture and its forms and motifs remain significant elements of our own built environments Roman Architecture places the varied architecture of ancient Rome from its humble apartment blocks to its grand public structures within the broader context of Roman society It takes as its starting point the writings of the Roman architect Vitruvius as one voice in a broader contemporary debate about the nature and value of architecture What did the Romans themselves think architecture was for What was built by whom and why How was architecture represented in text and image The interplay of type and variation that are the hallmark Roman architecture are here traced back to the human actions and choices from which they originated Janet DeLaine explores how the desires of patrons for novelty and individuality were met by architects and builders working within the practical constraints of available materials and the moral prescriptions of religious and social norms to create new forms Ranging from early Rome to the late empire this volume casts new light on many familiar monuments of the city of Rome but also on less well known examples from across the empire Through an examination of the key types of buildings at the heart of Roman society and their decoration it reveals the symbolic meaning of architecture in terms of competitive power displays and commemoration and it explores how architecture helped to define being Roman at different times and in different places of the empire Technology in Transition A.D. 300-650 Luke Lavan, Enrico Zanini, Alexander Sarantis, 2008-03-31 This book is the first general work to be published on technology in Late Antiquity It seeks to survey aspects of the technology of the period and to respond to questions about technological continuity stagnation and decline The book opens with a comprehensive bibliographic essay

that provides an overview of relevant literature The main section then explores technologies in agriculture production metal ceramics and glass engineering and building Papers draw on both archaeological and textual sources and on analogies with medieval and early modern technologies Reference is made not only to the periods which preceded it but to the transition to the Early Middle Ages and to the technological heritage of Late Antiquity to the Islamic world Several papers focus on Italy whilst others consider North Africa Asia Minor and the Near East

The Arts in Early England: Ecclesiastical architecture in England from the conversion of the Saxons to the Norman conquest. Appendix: Index list and map of Saxon churches Gerard Baldwin Brown, 1903

Roman Architecture Rogan Fish, Roman architecture emerged as a distinctive style that blended elements from earlier civilizations primarily Greek and Etruscan influences As Rome expanded from a small settlement into a powerful empire its architectural identity evolved incorporating new techniques and materials that allowed for grander and more functional structures The early foundations of Roman architecture set the stage for innovations that would shape the empire's urban landscape for centuries One of the most significant influences on Roman architecture came from the Etruscans a civilization that dominated central Italy before Rome's rise The Etruscans were skilled builders who introduced techniques such as the use of the arch and vault both of which would later become hallmarks of Roman engineering Etruscan temples with their high podiums and deep porches also served as models for early Roman religious structures Another major influence was Greek architecture which Romans admired and adapted to suit their needs The Greeks provided inspiration in the use of columns decorative friezes and symmetrical design elements that were later integrated into Roman temples public buildings and monuments Roman architectural development was also shaped by advancements in building materials and construction techniques The early Romans initially built using wood and mudbrick but as they refined their skills they transitioned to more durable materials like stone and concrete The introduction of concrete was a groundbreaking innovation allowing for stronger and more flexible structures Unlike the Greeks who relied heavily on marble the Romans preferred concrete for its affordability and adaptability enabling them to construct larger and more complex buildings such as amphitheaters aqueducts and domes
