Herreid,2012-12-06 At the 1980 Christmas meetings of the American Society of zoologists in Seattle Washington the Division of Comparative Physiology and Biochemistry sponsored a symposium on the locomotion and exercise of arthropods This book is an outgrowth of that symposium To our knowledge the symposium and this volume are the first attempts to deal with all of the major modes of locomotion flight swimming and pedestrian travel among the arthropods in a comprehensive fashion The time seems propitious to focus on arthropod locomotion In the last decade enormous strides have been made in understanding locomotion both arthropod and vertebrate alike There has been an explosion of new ideas new techniques and new data These deserve greater attention and discussion than is possible in specialized journals Hopefully this book will fill this gap moreover it should serve as a benchmark for newcomers to see what has happened to date and perhaps act as a launching pad for research to come Whatever the case a symposium volume such as this serves to highlight our current strengths and weaknesses In the present case it reveals the relative abundance of information on flying and walking and the dearth of data available on swimming it exposes the fact that insects and crustaceans are fairly well studied and arachnids are not **American Book Publishing Record** ,1998
