McKinnon, Krishan Khurana, 2009-07-30 Few worlds are as tantalizing and enigmatic as Europa whose complex icy surface intimates the presence of an ocean below Europa beckons for our understanding and future exploration enticing us with the possibilities of a water rich environment and the potential for life beyond Earth This volume in the Space Science Series with more than 80 contributing authors reveals the discovery and current understanding of Europa's icy shell subsurface ocean presumably active interior and myriad inherent interactions within the Jupiter environment Europa is the foundation upon which the coming decades of scientific advancement and exploration of this world will be built making it indispensable for researchers students and all who hold a passion for exploration **Glacial Isostatic Adjustment** Giorgio Spada, Daniele Melini, 2025-07-28 This book aims at presenting a synthetic but self contained theory of Glacial Isostatic Adjustment GIA firmly grounded on physics and mathematics However at the same time it also describes various phenomenological aspects making it appealing also to a broad audience of Earth scientists not having a technical background The interest on GIA is motivated by the entangled processes involved reflecting interactions between the solid Earth the oceans and the cryosphere In the context of climate change GIA has a special role For example ground or space based geodetic methods aimed at observing the mass balance variations of the contemporary ice sheets require a GIA correction before they can be suitably interpreted For these reasons GIA modeling has seen a considerable development recently with a growing attention by a broad audience of scientists in the fields of geophysics geology geodesy and Earth system science **Tidal Friction and the Earth's Rotation** Peter

Brosche,2013-12-01 P Brosche The development of the ideas and observational techniques related to the subject of our meeting Tidal friction and the Earth's rotation Bielefeld September 1977 is one of the most fascinating books not merely chapters of the modern history of science Its genealogical tree is as intricate as that of mankind itself There are dead ends and superfluous re discoveries Due to these circumstances and to the pure extent of the topic it is impossible to give more than a few highlights here The first relevant observational fact was discovered by the famous English astronomer E Halley in 1695 Berry 1961 He simply could not arrive at an agreement between ancient and recent eclipses using a constant mean angular motion of the Moon Instead he had to introduce an empirical acceleration term in the mean motion Known as the secular acceleration it has ever since been a most challenging subject of celestial mechanics and a main branch of the genealogical tree already mentioned In 1754 completely independently and almost certainly in ignorance of those specialists activities the German philosopher Kant established the idea of tidal friction as a decelerating mechanism for the rotation of the Earth Felber 1974 Although he made some errors in his rough computations the majority of the constitutive elements of his concept have survived to the present day Brosche 1977 *Gravity* Eric Poisson, Clifford M. Inventive Methods Celia Lury, Nina Wakeford, 2012-06-25 Social and cultural research has changed dramatically in the last few years in response to changing conceptions of the empirical an intensification of interest in interdisciplinary work and the growing need to communicate with diverse users and audiences Methods texts however have not kept pace with these changes This volume provides a set of new approaches for the investigation of the contemporary world Building on the increasing importance of methodologies that cut across disciplines more than twenty expert authors explain the utility of devices for social and cultural research their essays cover such diverse devices as the list the pattern the event the photograph the tape recorder and the anecdote This fascinating collection stresses the open endedness of the social world and explores the ways in which each device requires the user to reflect critically on the value and status of contemporary ways of making knowledge With a range of genres and styles of writing each chapter presents the device as a hinge between theory and practice ontology and epistemology and explores whether and how methods can be inventive The book will be a valuable resource for students and scholars of sociology and cultural studies **Index for Volumes 1-41**, 1999-06-18 This series provides a venue for longer reviews of current advances in geophysics Written at a level accessible to graduate students the articles serve to broaden knowledge of various fields and may be useful in courses and seminars

Interactions Between Physics and Dynamics of Solar System Bodies E. Bois, P. Oberti, Jacques Henrard, 2012-12-06 Fans of Asterix the Gallic know well that the only fear of people in Brittany is that the sky falls upon their head So it must have been a shock for them the fans of Asterix to learn that a horde of Physicists and Dynamicists some of them being actually Roman ils sont fous ces Romains invaded the bay of Saint Brieuc and spend a full week conjuring all the nastiness that the sky has in reserve revelling in the horrors hidden beyond the blue dome they talked with delight about asteroids comets and meteor streams they grinned at the idea of artificial satellites these pots and pans of space always ready to fall upon you some of them said strange things about the Moon the planets and evoked the rings of Saturn or of some other of their gods One evening a Roman from Pisa went as far as cornering some inhabitants in the large hut they used for their witchcraft and filled them with terror by describing the fate of the poor dinosaurs victims of a particularly nasty asteroid or was it a comet You will be surprized to learn that Bretons did not exact a spectacular revenge for these offenses On the contrary
