Irreducible Mind Edward F. Kelly,Emily Williams Kelly,Adam Crabtree,2010 Current mainstream opinion in psychology neuroscience and philosophy of mind holds that all aspects of human mind and consciousness are generated by physical processes occurring in brains Views of this sort have dominated recent scholarly publication The present volume however demonstrates empirically that this reductive materialism is not only incomplete but false The authors systematically marshal evidence for a variety of psychological phenomena that are extremely difficult and in some cases clearly impossible to account for in conventional physicalist terms Topics addressed include phenomena of extreme psychophysical influence

memory psychological automatisms and secondary personality near death experiences and allied phenomena genius level creativity and mystical states of consciousness both spontaneous and drug induced The authors further show that these rogue phenomena are more readily accommodated by an alternative transmission or filter theory of mind brain relations advanced over a century ago by a largely forgotten genius F W H Myers and developed further by his friend and colleague William James This theory moreover ratifies the commonsense conception of human beings as causally effective conscious agents and is fully compatible with leading edge physics and neuroscience The book should command the attention of all open minded persons concerned with the still unsolved mysteries of the mind Tell My Mother I'm Not Dead Trevor Hamilton,2012-10-08 This book divides into two parts The first is a personal narrative of the impact of the death of the author's son Ralph on him and his family and his efforts to see if there was any evidence for his continued existence generated largely through visits to mediums that a thinking person could take seriously The second is an attempt to evaluate that evidence objectively based on an extensive survey of current and past scientific research in the UK and the USA The title reflects the inevitable tension between emotion and intellect in such an enquiry *The Truth about Medium* Gary E. Schwartz,William L. Simon,2005-10-05 Every Monday night millions of Americans tune into Medium NBC's new hit drama featuring Allison DuBois an ordinary woman who helps police solve baffling crimes through her ability to communicate with the dead What most don't know is that this fictional character is based on a true life medium named Allison DuBois who is a consultant to the show For the past four years DuBois has been the subject of rigorous scientific experiments conducted at the University of Arizona by Harvard trained psychologist Gary Schwartz The Truth about Medium chronicles many of those experiments as well as the real life cases Allison has worked on and reveals hard laboratory evidence that psychic ability and mediumship are real *Science of Life After Death* Alexander Moreira-Almeida,Marianna de Abreu Costa,Humberto Schubert Coelho,2022-07-01 This book examines the best available empirical evidence regarding one of the most challenging and pervasive questions throughout ages cultures and religions the survival of human consciousness after death It begins with a contextual overview of belief in personal survival and refutes misguided historical and epistemological arguments against the notion of survival after death e g irrational purely religious impossible to be addressed by science that has been proved false by neuroscience The book provides an overview of the scientific evidence regarding the survival of human consciousness after death focusing on studies on mediumship near death and out of body experiences and reincarnation Featured topics of coverage include The belief in life after death in the contemporary world as well as in the history of religions and philosophy The key misguided arguments and prejudices against the academic study of afterlife survival What constitutes empirical evidence for survival after death The main explanatory hypotheses alternative to survival after death The chief cultural barriers to a fair examination of the available evidence for survival of consciousness after death Science of Life After Death is an essential resource for researchers professors and graduate students as well as clinicians therapists and

other professionals in developmental and clinical psychology spirituality religious and consciousness studies psychiatry neuroscience neurology phenomenology philosophy complementary and alternative medicine and all interrelated disciplines

The Afterlife Experiments Gary E. Schwartz, William L. Simon, 2002-03-13 An esteemed scientist's personal journey from skepticism to wonder and awe provides astonishing answers to a timeless question Is there life after death Are love and life eternal This exciting account presents provocative evidence that could upset everything that science has ever taught Daring to risk his worldwide academic reputation Dr Gary E Schwartz along with his research partner Dr Linda Russek asked some of the most prominent mediums in America including John Edward Suzane Northrup and George Anderson to become part of a series of extraordinary experiments to prove or disprove the existence of an afterlife THE AFTERLIFE EXPERIMENTS This riveting narrative with its electrifying transcripts puts the reader on the scene of a breakthrough scientific achievement contact with the beyond under controlled laboratory conditions In stringently monitored experiments leading mediums attempted to contact dead friends and relatives of sitters who were masked from view and never spoke depriving the mediums of any cues The messages that came through stunned sitters and researchers alike Here as they unfolded in the laboratory setting are uncanny revelations about a son's suicide what a deceased father wanted to say about his last days in a coma the transformation of a man's lifelong doubts about the afterlife and most amazing of all a forecast of a beloved spouse's death Dr Schwartz was forced by the overwhelmingly positive data to abandon his skepticism reaching some startling conclusions Compelling from the first page to the last *The Afterlife Experiments* is the amazing documentation of groundbreaking experiments you will never forget

Afterlife Encounters Dianne Arcangel, 2005-09-02 Never before released research proves the dead communicate with us As a former hospice worker and director of the Elisabeth Kbler Ross Center Dianne Arcangel was certain that visitations from beyond death provided comfort and hope for loved ones still grappling with their loss As a researcher however she was unable to find specific data to measure that comfort and hope To remedy this lack of information she created the Afterlife Encounters Survey a five year international survival study Afterlife Encounters reveals the results of this landmark study and for the first time offers a systematic categorization of such encounters explaining when these encounters are most likely to occur and what type of apparition is likely to appear Afterlife Encounters presents not only the data but also the stories beyond the numbers as friends and family members relate their visitation experiences in their own words Included are amazing stories of the dead returning to tell loved ones that they had been murdered and who it was that killed them apparitions revealing where family treasure was buried even one spirit who provided a remarkable account of the tragedies of 9 11 weeks before those events occurred The stats and stories that Arcangel shares are certain to stay with you for a long time as will her eye opening conclusion afterlife encounters provide real lasting comfort and hope to an astounding 97 percent of those loved ones who experience them

Exploring Frontiers of the Mind-Brain Relationship Alexander Moreira-Almeida, Franklin Santana Santos, 2011-11-25 The conscious mind defines

human existence Many consider the brain as a computer and they attempt to explain consciousness as emerging at a critical but unspecified threshold level of complex computation among neurons The brain as computer model however fails to account for phenomenal experience and portrays consciousness as an impotent after the fact epiphenomenon lacking causal power And the brain as computer concept precludes even the remotest possibility of spirituality As described throughout the history of humankind seemingly spiritual mental phenomena including transcendent states near death and out of body experiences and past life memories have in recent years been well documented and treated scientifically In addition the brain as computer approach has been challenged by advocates of quantum brain biology who are possibly able to explain scientifically nonlocal seemingly spiritual mental states Exploring Frontiers of the Mind Brain Relationship argues against the purely physical analysis of consciousness and for a balanced psychobiological approach This thought provoking volume bridges philosophy of mind with science of mind to look empirically at transcendent phenomena such as mystic states near death experiences and past life memories that have confounded scientists for decades Representing disciplines ranging from philosophy and history to neuroimaging and physics and boasting a panel of expert scientists and physicians including Andrew Newberg Peter Fenwick Stuart Hameroff Mario Beauregard Deepak Chopra and Chris Clarke the book rigorously follows several lines of inquiry into mind brain controversies challenging readers to form their own conclusions or reconsider previous ones Key coverage includes Objections to reductionistic materialism from the philosophical and the scientific tradition Phenomena and the mind brain problem The neurobiological correlates of meditation and mindfulness The quantum soul a view from physics Clinical implications of end of life experiences Mediumistic experience and the mind brain relationship Exploring Frontiers of the Mind Brain Relationship is essential reading for researchers and clinicians across many disciplines including cognitive psychology personality and social psychology the neurosciences neuropsychiatry palliative care philosophy and quantum physics This book brings together some precious observations about the fundamental mystery of the nature of consciousness It raises many questions that serve to invite each of us to be more aware of the uncertainty of our preconceptions about consciousness This book on the frontiers of mind body relationships is a scholarly embodiment of creative and open minded science C Robert Cloninger MD Wallace Renard Professor of Psychiatry Genetics and Psychology Washington University School of Medicine St Louis MO

Beyond Physicalism Edward F. Kelly, Adam Crabtree, Paul Marshall, 2015-02-19 The rise of modern science has brought with it increasing acceptance among intellectual elites of a worldview that conflicts sharply both with everyday human experience and with beliefs widely shared among the world's great cultural traditions Most contemporary scientists and philosophers believe that reality is at bottom purely physical and that human beings are nothing more than extremely complicated biological machines On such views our everyday experiences of conscious decision making free will and the self are illusory by products of the grinding of our neural machinery It follows that mind and personality are necessarily extinguished at death and that there exists no deeper

transpersonal or spiritual reality of any sort Beyond Physicalism is the product of an unusual fellowship of scientists and humanities scholars who dispute these views In their previous publication Irreducible Mind they argued that physicalism cannot accommodate various well evidenced empirical phenomena including paranormal or psi phenomena postmortem survival and mystical experiences In this new theory oriented companion volume they go further by attempting to understand how the world must be constituted in order that these rogue phenomena can occur Drawing upon empirical science metaphysical philosophy and the mystical traditions the authors work toward an improved big picture of the general character of reality one which strongly overlaps territory traditionally occupied by the world s institutional religions and which attempts to reconcile science and spirituality by finding a middle path between the polarized fundamentalisms religious and scientific that have dominated recent public discourse Contributions by Harald Atmanspacher Loriliai Biernacki Bernard Carr Wolfgang Fach Michael Grosso Michael Murphy David E Presti Gregory Shaw Henry P Stapp Eric M Weiss and Ian Whicher

"Visions of the Industrial Age, 1830-1914 " Amy Woodson-Boulton, 2017-07-05 Providing a comprehensive interdisciplinary assessment and with a particular focus on expressions of tension and anxiety about modernity this collection examines visual culture in nineteenth century Europe as it attempted to redefine itself in the face of social change and new technologies Contributing scholars from the fields of history art literature and the history of science investigate the role of visual representation and the dominance of the image by looking at changing ideas expressed in representations of science technology politics and culture in advertising art periodicals and novels They investigate how during the period new emphasis was placed on the visual with emerging forms of mass communication photography lithography newspapers advertising and cinema while older forms as varied as poetry the novel painting interior decoration and architecture became transformed The volume includes investigations into new innovations and scientific development such as the steam engine transportation and engineering the microscope spirit photography and the orrery as well as how this new technology is reproduced in illustrated periodicals The essays also look at more traditional forms of creative expression to show that the same concerns and anxieties about science technology and the changing perceptions of the natural world can be seen in the art of Armand Guillaumin Auguste Rodin Gustave Caillebotte and Camille Pissarro in colonial nineteenth century novels in design manuals in museums and in the decorations of domestic interior spaces Visions of the Industrial Age 1830 1914 offers a thorough exploration of both the nature of modernity and the nature of the visual
