for solution of electromagnetic scattering problems and new data processing techniques are also presented Readers will come to appreciate that GPR is a safe advanced non destructive and noninvasive imaging technique that can be effectively used for the inspection of composite structures and the performance of diagnostics relevant to the entire life cycle of civil engineering works

Isem 03 A. Bossavit, D. Lesselier, A. Razek, 2004 This publication contains a selection of 124 papers among the 165 full length contributions which were submitted on site at ISEM 2003 The objective of the symposia series is to vigorously promote the research in the field of electro mechanical systems The reader will we hope appreciate the variety of topics that were addressed This is what makes ISEM so stimulating for whoever is interested in the applications of electromagnetics and its opening toward many technical fields Yet this publication does not intend to be a mosaic of sub disciplines but aims at their integration and synergy This will be demonstrated by the present selection

Analytical and Computational Methods in Scattering and Applied Mathematics Fadil Santosa, Ivar Stakgold, 2019-05-07 Professor Ralph Kleinman was director of the Center for the Mathematics of Waves and held the UNIDEL Professorship of the University of Delaware Before his death in 1998 he made major scientific contributions in the areas of electromagnetic scattering wave propagation and inverse problems He was instrumental in bringing together the mathematic

Polar Cap Boundary Phenomena Jøran Moen, A. Egeland, Michael Lockwood, 2012-12-06 These proceedings are based on the invited talks and selected research reports presented at the NATO Advanced Study Institute ASI on POLAR CAP BOUNDARY PHENOMENA held at Longyearbyen Svalbard June 4 13 1997 The role of the polar cap and its boundary is very substantial in solar terrestrial physics At this NATO AS a major change in thinking on the cusp precipitation region in the high latitude dayside upper atmosphere was reflected at least for intervals when the interplanetary magnetic field IMF is directed southward It is likely that this has implications for northward IMF as well The change comes from the now almost complete acceptance of the concept of magnetosheath particle entry along open magnetic field lines and the evolution of the precipitation into the upper atmosphere with time elapsed since magnetic reconnection which opened the field line A key prediction of this view is that the low latitude boundary layer LLBL is on open field lines

Direct and Inverse Problems of Mathematical Physics R.P. Gilbert, Joji Kajiwar, Yongzhi S. Xu, 2013-04-17 This volume consists of papers presented in the special sessions on Wave Phenomena and Related Topics and Asymptotics and Homogenization of the ISAAC 97 Congress held at the University of Delaware during June 2 7 1997 The ISAAC Congress coincided with a U S Japan Seminar also held at the University of Delaware The latter was supported by the National Science Foundation through Grant INT 9603029 and the Japan Society for the Promotion of Science through Grant MTCS 134 It was natural that the participants of both meetings should interact and consequently several persons attending the Congress also presented papers in the Seminar The success of the ISAAC Congress and the U S Japan Seminar has led to the ISAAC 99 Congress being held in Fukuoka Japan during August 1999 Many of the same participants will return to this Seminar Indeed it appears that the spirit of the U S Japan Seminar will be

continued every second year as part of the ISAAC Congresses We decided to include with the papers presented in the ISAAC Congress and the U S Japan Seminar several very good papers by colleagues from the former Soviet Union These participants in the ISAAC Congress attended at their own expense This volume has the title Direct and Inverse Problems of Mathematical Physics which consists of the papers on scattering theory coefficient identification uniqueness and existence theorems boundary controllability wave propagation in stratified media viscous flows nonlinear acoustics Sobolev spaces singularity theory pseudo differential operators and semigroup theory

Electrodynamics of Density Ducts in Magnetized Plasmas I G Kondratiev, A V Kudrin, T M Zaboronkova, 2019-08-16 Providing a systematic and self contained treatment of excitation propagation and re emission of electromagnetic waves guided by density ducts in magnetized plasmas this book describes in detail the theoretical basis of the electrodynamics of ducts The classical dielectric waveguide theory in open guiding systems in magnetoplasma is subjected to rigorous generalization The authors emphasize the conceptual physical and mathematical aspects of the theory while demonstrating its applications to problems encountered in actual practice The opening chapters of the book discuss the underlying physical phenomena outline some of the results obtained in natural and artificial density ducts and describe the basic theory crucial to understanding the remainder of the book The more specialized and complex topics dealt with in subsequent chapters include the theory of guided wave propagation along axially uniform ducts finding the field excited by the source in the presence of a duct excitation of guided modes the asymptotic theory of wave propagation along axially nonuniform ducts and mode re emission from a duct The full wave theory is used throughout most of the book to ensure consistency and the authors start with simpler cases and gradually increase the complexity of the treatment

Radiating Nonuniform Transmission-Line Systems and the Partial Element Equivalent Circuit Method Prof. Dr. Juergen Nitsch, Dr. Frank Gronwald, Prof. Dr. Gunter Wollenberg, 2009-10-29 High frequencies of densely packed modern electronic equipment turn even the smallest piece of wire into a transmission line with signal retardation dispersion attenuation and distortion In electromagnetic environments with high power microwave or ultra wideband sources transmission lines pick up noise currents generated by external electromagnetic fields These are superimposed on essential signals the lines acting not only as receiving antennas but radiating parts of the signal energy into the environment This book is outstanding in its originality While many textbooks rephrase that which has been written before this book features an accessible introduction to the fundamentals of electromagnetics an explanation of the newest developments in transmission line theory featuring the transmission line super theory developed by the authors a unique exposition of the increasingly popular PEEC partial element equivalent circuit method including recent research results Both the Transmission Line Theory and the PEEC method are well suited to combine linear structures with circuit networks For engineers researchers and graduate students this text broadens insight into the basics of electrical engineering It provides a deeper understanding of Maxwellian circuit like representations of multi conductor transmission lines justifies future
