How High the Sky? Thomas Gangale, 2018-11-26 In *How High the Sky* jurist Thomas Gangale explores the oldest and most important controversy in space law how far up does national airspace go and where does the international environment of outer space begin Even though nations did not object to the first satellites flying over their sovereign territory after more than six decades there is still no international agreement on how low the right of space object overflight extends nor are there agreed legal definitions of space object and space activity Dr Gangale brings his background as an aerospace engineer to bear in exploding long held beliefs of the legal community and he offers a draft international convention to settle the oldest and most intractable problems in space law How We See the Sky Thomas Hockey, 2024-05-31 Gazing up at the heavens from our backyards or a nearby field most of us see an undifferentiated mess of stars if that is we can see anything at all through the glow of light pollution Today's casual observer knows far less about the sky than did our ancestors who depended on the sun and the moon to tell them the time and on the stars to guide them through the seas Nowadays we don't need the sky which is good because we've made it far less accessible hiding it behind the skyscrapers and the excessive artificial light of our cities *How We See the Sky* gives us back our knowledge of the sky offering a fascinating overview of what can be seen there without the aid of a telescope Thomas Hockey begins by scanning the horizon explaining how the visible universe rotates through this horizon as night turns to day and season to season Subsequent chapters explore the sun's and moon's respective motions through the celestial globe as well as the appearance of solstices eclipses and planets and how these are accounted for in different kinds of calendars In every chapter Hockey introduces the common vocabulary of today's astronomers uses examples past and present to explain them and provides conceptual tools to help newcomers understand the topics he discusses Packed with illustrations and enlivened by historical anecdotes and literary references *How We See the Sky* reacquaints us with the wonders to be found in our own backyards *Open Sky* Paul Virilio, 2020-05-05 One day the day will come when the day will not come Bleak but passionately political in its analysis of the social destruction wrought by modern technologies of communication and surveillance *Open Sky* is Paul Virilio's most far reaching and radical book Deepening and extending his earlier work he explores the growing danger of what he calls a generalized accident

provoked by the breakdown of our collective and individual relation to time space and movement in the context of global electronic media But this is not merely a lucid and disturbing lament for the loss of real geographical spaces distance intimacy or democracy Open Sky is also a call for revolt against the insidious and accelerating manipulation of perception by the electronic media and repressive political power against the tyranny of real time and against the infantilism of cyberhype Virilio makes a powerful case for a new ethics of perception and a new ecology one which will not only strive to protect the natural world from pollution and destruction but will also combat the devastation of urban communities by proliferating technologies of control and virtuality The Fated Sky Benson Bobrick,2006-11-14 The Fated Sky looks at famous figures and important historical events that were influenced by astrology *i in the sky* Alison Scammell,2023-04-28 *i in the sky* is a collection of essays by over 40 experts including leading writers Charles Handy and Don Tapscott giving their personal vision of the future of information Information here is given its widest meaning and includes such subjects as the Internet electronic commerce cybernetics robotics artificial intelligence and even computers as fashion accessories Information as a phenomenon pervades all areas of life and its evolution has consequences for everyone Many of the papers have central themes such as the future of computer intelligence library and information services interactive Internet marketing and networked learning in higher education One paper links the technology enabling remote and online communication to the deconstruction of the corporation and the rise of flexible working Professor Kevin Warwick writes about cybernetics and artificial intelligence and describes an experiment involving a surgically implanted computer chip in his arm Other papers deal with scholarly communication smart houses and intelligent appliances Two of the chapters are written as fiction one by contemporary fantasy writer Lise Leroux who paints a menacing vision of human error in a tale of virtual reality
