Literature in the English lessons of German elementary schools - demonstrated at the example of Julia Donaldsons and Axel Schefflers book "The Gruffalo" (1999) Stefanie Wagenbrenner, 2007-01-15 Seminar paper from the year 2005 in the subject English Language and Literature Studies Literature grade 2 3 University of Cologne course Poems in the language classroom language English abstract Since English has become a part of the curriculum of German elementary schools already methods of teaching had and still have to be found to make the young pupils get into touch with the foreign language The method of teaching as well as the according educational aids should cause the desire of learning and working with the English language In the history of education teachers of foreign languages have never been so knowledgeable about what to do in the classroom or have had so many advanced tools at their disposal to help their pupils learn 1 But since the children in third grade are just about eight or nine years old when they get into touch with the English language for the first time the teacher has to choose his subjects of instruction and his educational aids very carefully so his her lessons make it possible for all the pupils to achieve a basic knowledge of the foreign language According to the title of the seminar I visited Poems in the Language Classroom I am going to talk about literature and in detail poetry as one important tool concerning language teaching Emphasizing this importancy I am going to present the results of an English lesson at a forth grade of a German elementary school that I created about Julia Donaldson s and Axel Scheffler s book The Gruffalo 1999

Poetic Logic and the Origins of the

Mathematical Imagination Marcel Danesi, 2023-09-02 This book treats eighteenth century Italian philosopher Giambattista Vico's theory of poetic logic for the first time as the originating force in mathematics transforming instinctive counting and spatial perception into poetic metaphorical symbolism that dovetails with the origin of language. It looks at current work on mathematical cognition from Lakoff and N ez to Butterworth Dehaene and beyond matching it against the poetic logic paradigm. In a sense it continues from where Kasner and Newman left off connecting contemporary research on the mathematical mind to the idea that the products of early mathematics were virtually identical to the first forms of poetic language. As such this book informs the current research on mathematical cognition from a different angle by looking back at a still relatively unknown philosopher within mathematics. The aim of this volume is to look broadly at what constitutes the mathematical mind through the Vichian lens of poetic logic. Vico was among the first to suggest that the essential nature of mind could be unraveled indirectly by reconstructing the sources of its modifications his term for creations that is by examining the creation and function of symbols words and all the other uniquely human artifacts including mathematics the mind has allowed humans to establish the world of civil society Vico's term for culture and civilization. The book is of interest to cognitive scientists working on math cognition. It presents the theory of poetic logic as Vico articulated it in his book *The New Science* examining its main premises and then applying it to an interpretation of the ongoing work in math cognition. It will also be of interest to the general public since it presents a history of early mathematics through the lens of an idea that has borne fruit in understanding the origin of language and symbols more broadly.

An Anthropology of Puzzles Marcel Danesi, 2020-05-15 *An Anthropology of Puzzles* argues that the human brain is a puzzling organ which allows humans to literally solve their own problems of existence through puzzle format. Noting the presence of puzzles everywhere in everyday life Marcel Danesi looks at puzzles in society since the dawn of history showing how their presence has guided large sections of human history from discoveries in mathematics to disquisitions in philosophy. Danesi examines the cognitive processes that are involved in puzzle making and solving and connects them to the actual physical manifestations of classic puzzles. Building on a concept of puzzles as based on Jungian archetypes such as the river crossing image the path metaphor and the journey Danesi suggests this could be one way to understand the public fascination with puzzles. As well as drawing on underlying mental archetypes the act of solving puzzles also provides an outlet to move beyond biological evolution and Danesi shows that puzzles could be the product of the same basic neural mechanism that produces language and culture. Finally Danesi explores how understanding puzzles can be a new way of understanding our human culture.
