Second Workshop On The Management Of Replicated Data:

Second Workshop on the Management of Replicated Data, November 12-13, 1992, Monterey, California Jehan-François Pâris, Hector Garcia-Molina, 1992 **Second Workshop on the Management of Replicated Data, November 12-13, 1992, Monterey, California** Jehan-François Pâris, Hector Garcia-Molina, 1992-01-01 Meeting held November 1992 in Monterey California This book embraces the primary objective of providing information of interest to researchers and developers actively involved in the various aspects of replicated data management No index Annotation copyright by Book News Inc Portland OR Replicated Data ,2002 **Management of Replicated Data in Large Scale Systems** Noha Adly, 1995 **Replicated Data Management for Mobile Computing** Terry Douglas, 2022-05-31 Managing data in a mobile computing environment invariably involves caching or replication In many cases a mobile device has access only to data that is stored locally and much of that data arrives via replication from other devices PCs and services Given portable devices with limited resources weak or intermittent connectivity and security vulnerabilities data replication serves to increase availability reduce communication costs foster sharing and enhance survivability of critical information Mobile systems have employed a variety of distributed architectures from client server caching to peer to peer replication Such systems generally provide weak consistency models in which read and update operations can be performed at any replica without coordination with other devices The design of a replication protocol then centers on issues of how to record propagate order and filter updates Some protocols utilize operation logs whereas others replicate state Systems might provide best effort delivery using gossip protocols or multicast or guarantee eventual consistency for arbitrary communication patterns using recently developed pairwise knowledge driven protocols Additionally systems must detect and resolve the conflicts that arise from concurrent updates using techniques ranging from version vectors to read write dependency checks This lecture explores the choices faced in designing a replication protocol with particular emphasis on meeting the needs of mobile applications It presents the inherent trade offs and implicit assumptions in alternative designs The discussion is grounded by including case studies of research and commercial systems including Coda Ficus Bayou Sybase s iAnywhere and Microsoft s Sync Framework Table of Contents Introduction System Models Data Consistency Replicated Data Protocols Partial Replication Conflict Management Case Studies Conclusions Bibliography Database Reengineering and Interoperability T.Y. Cheung, J. Fong, B. Siu, 2012-12-06 Modern computing management systems and application programs are often designed as open systems In an open environment the users application programs serving similar purposes though possibly implemented using different hardware or software technologies can interact easily and properly with one other But it is a big challenge in research and development to provide the means for integrating these technologies and reengineering the new or existing management systems so as to make all of the relevant components interoperable In case of databases because of the variety in data models and theory the interoperability and reengineering

issues become even more complex and crucial especially for companies heavily involved in data management With the rapid advances in networking and database modeling technology old issues may have to be reinvestigated and new issues come up constantly It is our hope that this year s workshop the sixth in a series of annual events can provide a timely forum for database researchers and practitioners to share their recent experience and results in various aspects of this fast developing field This series of workshops has been organized by the Hong Kong Computer Society and financially supported by many local industrial and business companies This year the Cooperative Research Centre for Open Systems Technology located in the Department of Computer Science City University of Hong Kong has joined the organization team and the list of financial sponsors

Disconnected Operation in a Distributed File System

James J. Kistler, 1995-12-13 This book is based on the author's PhD thesis which was selected during the 1993 ACM Doctoral Dissertation Competition as one of the three best submissions. The focus of this work is on the issue of availability in distributed file systems. It presents the important new technique called disconnected operation in which clients mask failures and voluntary network detachments by emulating the functionality of servers where actual server-oriented solutions are inadequate. This permits client operation even under complete isolation from the server. The clean integration of mobile computers into the system is an important side effect of the new technique. The design and implementation of disconnected file service in a working system, the Coda file system, is described in detail. *Proceedings of the Second IFCIS International Conference on Cooperative Information Systems, CoopIS'97* Arbee L.
