Probability Tales Charles Miller Grinstead, William Paul Peterson, James Laurie Snell, 2011 This book explores four real world topics through the lens of probability theory It can be used to supplement a standard text in probability or statistics Most elementary textbooks present the basic theory and then illustrate the ideas with some neatly packaged examples Here the authors assume that the reader has seen or is learning the basic theory from another book and concentrate in some depth on the following topics streaks the stock market lotteries and fingerprints This extended format allows the authors to present multiple approaches to problems and to pursue promising side discussions in ways that would not be possible in a book constrained to cover a fixed set of topics To keep the main narrative accessible the authors have placed the more technical mathematical details in appendices The appendices can be understood by someone who has taken one or two semesters of calculus *Suspended Music* Lothar von Falkenhausen, 1993 The Chinese made the world's first bronze chime bells which they used to perform ritual music particularly during the Shang and Zhou dynasties ca 1700-221 B.C. Lothar von Falkenhausen's rich and detailed study reconstructs how the music of these bells the only Bronze Age instruments that can still be played may have sounded and how it was conceptualized in theoretical terms His analysis and discussion of the ritual political and technical aspects of this music provide a unique window into ancient Chinese culture This is the first interdisciplinary perspective on recent archaeological finds that have transformed our understanding of ancient Chinese music Of great significance to the understanding of Chinese culture in its crucial formative stage it provides a fresh point of departure for exploring later Asian musical history and offers great possibilities for comparisons with music worldwide
