Secret Aircraft Designs Of The Third Reich:

Secret Aircraft Designs of the Third Reich David Myhra, 1998 In *Secret Aircraft Designs of the Third Reich* aircraft biographer David Myhra gives the reader much more than pictures of proposed German aircraft projects although this work is richly illustrated by state of the art digital images by Mario Merino The total number of German projects is in excess of 400 Blohm und Voss tops the list with over 200 project designs The reader is introduced to the men behind these proposed aircraft One will discover Woldemar Voigt's frustration with his Me P 1101 and why it simply would not jell The reader will learn why Dr Gert Gotha lobbied the RLM to take his Go P 60 designs and scrap the Horten Ho 229 We see why critics of design genius Alexander Lippisch said that he was a man who had a new design almost every day but fails to put most of them into the air Myhra describes the shameful handling of Hugo Junkers the father of German aviation by the Gestapo It was Junkers who said that ideas for advanced aircraft projects were about as cheap as blueberries To an idea must be added materials resources and time And time in all the secret projects was short very short Although over 400 aircraft projects were on the drawing board when the war in Europe ended in May 1945 only a handful were in the prototype stage This outstanding book also offers a superb collection of photographs of scale models from contributors throughout the world and digital images by Mario Merino and Andreas Ott that offer a one of a kind look at secret German designs

Secret Wings of World War II Lance Cole, 2015-06-30 There are many myths and legends surrounding the advanced German aeronautical technology of the Second World War There are also facts and proven events Yet within these stories and behind these facts lie conspiracy theories mistaken assumptions and denials that seem to contradict the evidence So what really happened How far ahead were the German scientists And of even greater interest why and how There have been other books about advanced German wartime aeronautics yet few authors have fully examined the detail of the designs and their relevance to the fighter and bomber legends of the 1950s and 60s let alone the current crop of military and civil all wing or blended wing aircraft This book charts the story from its origins through current day innovations and beyond into the all wing future of tomorrow
