and Melaka were established as free ports of British trade in Southeast Asia and proved attractive to large numbers of regional migrants. Following the abolishment of slavery in 1833 the Straits government transported convicts from the East India Company's Indian presidencies to the settlements as a source of inexpensive labor. The prison became the primary experimental site for the colonial plural society and convicts were graduated by race and the labor needed for urban construction. *Hidden Hands and Divided Landscapes* investigates how a political system aimed at managing ethnic communities in the larger material context of the colonial urban project was first imagined and tested through the physical segregation of the colonial prison. It relates the story of a city Singapore and a contemporary city state whose plural society has its origins in these historical divisions. A description of the evolution of the ideal plan for a plural city across the three settlements is followed by a detailed look at Singapore's colonial prison. Chapters trace the prison's development and its dissolution across the urban landscape through the penal labor system. The author demonstrates the way in which racial politics were inscribed spatially in the division of penal facilities and how the map of the city was reconfigured through convict labor. Later chapters describe penal resistance first through intimate stories of penal life and then through a discussion of organized resistance in festival riots. Eventually the plural city ideal collapsed into the hegemonic urban form of the citadel where a quite different military vision of the city became evident. *Hidden Hands and Divided Landscapes* is a fascinating and thoroughly original study in urban history and the making of multiethnic society in Singapore. It will compel readers to rethink the ways in which colonial urban history, postcolonial urbanism and governance have been theorized by scholars and represented by governments.

Secure Information Management Using Linguistic Threshold Approach

Marek R. Ogiela, Urszula Ogiela, 2013-08-19 In recent years cryptographic techniques for protecting and hiding secret information have been included in directions of research on intelligent information management. Data can be managed securely due to the use of algorithms for ensuring the confidentiality of data, information splitting techniques as well as protocols for sharing information and methods of its reconstruction. This is why techniques of advanced splitting and reconstruction of information form the primary subject of *Secure Information Management Using Linguistic Threshold Approach* whose main purpose is to discuss the so called linguistic threshold schemes for information sharing. An attempt is also made to describe the opportunities of using these techniques to create new models of managing strategic information shared within a commercial organisation or a state institution. Such information is specially protected and its contents are used only if the authorised users are enabled to access it. This monograph attempts to define a model structure of information flow and for assigning information shares to particular groups of individuals concerned. The proposed information flow model can be integrated into practical solutions within any organisation or institution improving the functionality of its legacy information systems. The use of strong mathematical cryptographic models to manage information constitutes a scientific innovation and a demonstration of the methods and opportunities of using advanced techniques for confidentially exchanging

information in tasks supporting data flow within a commercial organisation The interdisciplinary nature of the solutions proposed means that the subject of linguistic threshold schemes forming part of intelligent information management becomes a new challenge for the research and application work carried out The authors of this monograph hope that it will guide readers on an interesting journey through the cutting edge solution in the field of secure information management
