Managing The Ocean Resources Research Law:

Managing the Ocean Resources of the United States Daniel P. Finn, 2012-12-06 Federal programs applicable to the oceans and coastal zone have evolved incrementally in response to perceived needs to expedite emerging maritime development while conserving valuable marine resources As a result the current federal marine effort is divided among a plethora of programs administered by a number of agencies within different Departments The programs themselves are conducted under the authority of multiple statutes with varying reaches and objectives as a result they often overlap and conflict There is no assurance moreover that the coverage of federal programs is complete in scope or comprehensive in conception No single institutional device can ensure that these programs will manage the marine resources of the United States consistently and comprehensively so as to derive maximum public benefit While the present maze of statutes regulations and executive directives may in theory provide opportunities for a wide ranging consideration of all relevant factors prior to making specific decisions there can be no guarantee that this objective is realized either systematically or reasonably effectively Recent political developments indicate that the structure of federal marine programs will continue to be subject to scrutiny for some time President Reagan's emphases on economic deregulation and development of outer continental shelf OCS oil and gas resources may lead to streamlining the OCS leasing and permitting process and altering the execution of the federal multiple use policy for marine areas
