Population And Development Planning:

Demands of Expanding Populations and Development Planning Frederic R. Siegel, 2008-08-03 Population Answering the Needs and Demands The world's human population is 6.6 billion people and growing by 80 million in 2005. Most of the growth is in less developed nations. The Population Reference Bureau 2006 estimates that the global population will reach 7.9 billion people by 2025. It is projected to stabilize at 9.2 billion people by 2050. Governments strive to attract industrial manufacturing services and other projects to advance their economies and thus cope with existing social and political problems and future challenges heightened by expanding populations. They are encouraged in these efforts by international lending and development organizations such as the World Bank and the International Finance Corporation. These and other multilateral regional and sub-regional development banks make funds available for economic and social improvement programs in developing countries. Table p. 1 Well planned projects can stimulate economic growth and create wealth in a society. This wealth can be used to promote the health, education and general welfare status of its members and their employment opportunities even as populations expand. There are many theories that define and expound on economic development. Malizi and Feser 1999 summarize the theories in terms of their essential dynamics, strengths and weaknesses and how they are applied to achieve growth. All theories agree that economic advancement is based on investing capital in projects that can flourish and yield financial gain over extended periods of time.

Population and Development W.T.S. Gould, 2015-05-08 The new edition of Population and Development offers an up to date perspective on one of the critical issues at the heart of the problems of development for all countries and especially those that seek to implement major economic and social change: the reflexive relationships between a country's population and its development. How does population size, distribution, age structure and skill base affect development patterns and prospects? How has global development been affected by regional population change? Retaining the structure of the well received first edition, the book has been substantially revised and updated. The opening chapters of the book establish the theoretical and historical basis for examining the basic reflexive relationship with exploration of the Malthusian perspective and its critics to examine how population change affects development and exploration of the Demographic Transition Model and its critics to examine how and to what extent development drives population change. These are followed by empirically rich chapters on each of the main components of population change: mortality, fertility, internal and international migration, age structures and skill base, each elaborating key ideas with detailed and contrasting case studies from all regions of the developing world. There are concluding and more integrative discussions on population policies and global population futures. Bringing together Population Studies, Development Studies and Geography, the new edition of Population and Development is a key resource for undergraduate and postgraduate students across a range of programmes with specialist modules on population change. There is a large bibliography with major new sections identifying a wide range of online resources for further study. Each chapter

contains a reading guide with discussion questions The text is enlivened by a number of case studies from around the world most of which are new or have been substantially revised Written by a leading international scholar in population the book successfully integrates cutting edge academic research with the focus and efforts of international development agencies
